1. Which of these questions would NOT be considered one of the basic economic questions?
   A) Should Brazil continue to produce ethanol?
   B) What production method should be used to make batteries for plug-in cars?
   C) When will the new high-speed train in California be completed?
   D) To whom will the production of solar panels be sold to?

2. What does the term “laissez-faire” mean in economics?
   A) Government plays a major role regulating businesses to protect consumers.
   B) Government does not intervene in personal decisions but it controls economic decisions.
   C) The market economy requires intervention to ensure efficiency.
   D) The role of government should be as minimal as possible.

3. Which of these would NOT be considered a factor of production?
   A) mineral deposits
   B) a large copy machine at the office
   C) college graduates seeking a job
   D) a bank loan used to start a new business

4. China produces many products at the lowest cost possible, even though Chinese consumers do not desire many of these products (e.g., football helmets). China is achieving:
   A) production efficiency only
   B) allocative efficiency only
   C) both production efficiency and allocative efficiency
   D) neither production efficiency nor allocative efficiency

5. Why is entrepreneurial ability considered a factor of production?
   A) because it is a physical input such as land, labor, and capital
   B) because entrepreneurs assume the risk of producing output, an important part of the production process
   C) because entrepreneurs work very long hours and demand large profits for the work that they accomplish
   D) because it is an input that can be used by itself to produce many goods and services desired by society
6. (Figure) What would be a reason why an economy is operating at point $D$?

A) A reduction in business investment causes unemployment to increase.
B) There is a new technological breakthrough in the production of energy-efficient airplanes.
C) An economy uses all of its inputs efficiently but changes the ratio of the goods produced.
D) An economy experiences an influx of immigrants seeking jobs.

7. (Figure) The area between which two points on the production possibilities frontier could represent an improvement in productive efficiency?

A) from $A$ to $B$
B) from $B$ to $C$
C) from $C$ to $B$
D) from $D$ to $B$
8. (Figure) The area between which two points on the PPF could represent an improvement in allocative efficiency?

A) from $A$ to $B$
B) from $A$ to $C$
C) from $B$ to $C$
D) from $B$ to $D$

9. Which of these would be least likely to increase economic growth?
A) An increase in investment in infrastructure such as new roads and rail lines.
B) An increase in tariffs to protect domestic industries from foreign competition.
C) An expansion of financial aid options to college students.
D) Protecting intellectual property rights (such as patents) to provide incentives for innovation.

10. The main reason why a production possibilities frontier would have a concave shape is:
A) because of decreasing opportunity costs
B) because the rate at which one good can be substituted for another is fixed.
C) because as a country specializes in one product, it must give up more of the other.
D) because consumers face diminishing marginal returns in consumption.

11. If a farmer can grow 100 tubs of grapefruit or 250 tubs of oranges per acre of land, what is the opportunity cost of growing one orange?
A) 0.4 of an orange
B) 0.4 of a grapefruit
C) 2.5 oranges
D) 2.5 grapefruits
12. For a country to have a comparative advantage in a good, it must have:
   A) more labor to produce that good
   B) more capital to produce that good
   C) an ability to produce more of that good than another country has
   D) a lower opportunity cost of producing that good

13. Which of the following is not possible for two countries who trade computers and automobiles with one another?
   A) One of the countries has an absolute advantage in the production of both products.
   B) One of the countries has a comparative advantage in the production of both products.
   C) One country has an absolute advantage in one product and a comparative advantage in the other product.
   D) One country does not have an absolute advantage in either product but has a comparative advantage in one product.

14. Suppose that Costa Rica is able to produce 50,000 pounds of coffee or 10,000 medical devices per day; Vietnam is able to produce 40,000 pounds of coffee or 5,000 medical devices per day. Which statement is TRUE?
   A) Costa Rica has an absolute advantage in medical device production, while Vietnam has an absolute advantage in coffee production.
   B) Costa Rica has a comparative advantage in the production of both coffee and medical devices.
   C) Costa Rica has a comparative advantage in coffee production, while Vietnam has a comparative advantage in the production of medical devices.
   D) Costa Rica has a comparative advantage in the production of medical devices, while Vietnam has a comparative advantage in coffee production.

15. Using the productivity rates for Spain and Portugal, which statement is TRUE?

<table>
<thead>
<tr>
<th>Country</th>
<th>Oranges per Worker per Day</th>
<th>Olives per Worker per Day</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spain</td>
<td>500</td>
<td>250</td>
</tr>
<tr>
<td>Portugal</td>
<td>400</td>
<td>100</td>
</tr>
</tbody>
</table>

   A) Spain has a comparative advantage in olives.
   B) Portugal has a comparative advantage in olives.
   C) Both Portugal and Spain have a comparative advantage in oranges.
   D) Both Spain and Portugal have a comparative advantage in olives.
Answer Key

1. C
2. D
3. D
4. A
5. B
6. A
7. D
8. C
9. B
10. C
11. B
12. D
13. B
14. D
15. A
1. Trade is:
   A) a way for rich countries to take advantage of poorer countries.
   B) good for rich countries and bad for poorer countries.
   C) something that slows down the economies of the trading countries.
   D) a driver of economic growth.

2. Which is NOT one of the three basic economic questions that each society must answer?
   A) What goods and services are to be produced?
   B) How are the goods and services to be produced?
   C) Who decides what goods and services are in demand?
   D) Who will receive the goods and services?

3. Which is NOT considered a basic economic question?
   A) How will the system accommodate change?
   B) What goods and services will be produced?
   C) Who will receive the goods and services?
   D) How will these goods and services be produced?

4. To answer the question of how goods and services are to be produced, society must decide:
   A) what products businesses want to produce.
   B) how to combine its scarce resources to produce the desired products.
   C) what products the government wants.
   D) what products to export.

5. The “what” question primarily refers to:
   A) the mix of goods and services that are produced.
   B) production efficiency.
   C) whether the goods and services are produced under a communist system or a democratic system.
   D) who gets the goods and services.

6. Which is NOT a basic economic question that societies must answer?
   A) What goods and services are to be produced?
   B) How are the goods and services to be produced?
   C) Why are these goods and services being produced?
   D) For whom are the goods and services being produced?
7. What are the three basic economic questions each society must answer?
   A) what to produce; how to produce; for whom to produce
   B) how much to produce; what quality to produce; what price to sell at
   C) what to produce; how much to produce, how to consume
   D) how much goes to government; how much goes to consumers; how much is exported

8. Which is NOT one of the basic economic questions that each society must answer?
   A) What goods and services are to be produced?
   B) How are these goods and services to be produced?
   C) How much do we pay those who produce the goods and services?
   D) Who will receive these goods and services?

9. _____ refers to the way an economy allocates goods and services to consumers.
   A) Production
   B) Capital
   C) Distribution
   D) Absolute advantage

10. The way an economy allocates output to consumers is called:
    A) distribution.
    B) efficiency.
    C) government allocation.
    D) output maximization.

11. Planned economies rely heavily on _____ to make most economic decisions.
    A) consumers
    B) producers
    C) the government
    D) corporations

12. A market economy is also known as a _____ economy, and decisions are made by _____.
    A) capitalist; the government
    B) capitalist; private individuals
    C) socialist; the government
    D) socialist; private individuals
13. A laissez-faire approach to the question of “how to produce” would be found in a:
   A) socialist economy.
   B) communist economy.
   C) market economy.
   D) planned economy.

14. In a communist state, the _____ decide(s) what a society wants, but in a capitalist economy, the _____ decide what products they want.
   A) government; producers
   B) consumers; producers
   C) government; consumers
   D) producers; consumers

15. Which statement is NOT part of a market economy?
   A) Most economic decisions are made by central governments.
   B) Product prices are the principal mechanism for communicating information in the system.
   C) Consumers are free to decide what goods and services to purchase.
   D) The government plays a primary role in protecting private property rights.

16. In a market economy, product prices do NOT help to determine how:
   A) consumers decide whether to buy or not buy.
   B) firms employ their resources.
   C) firms decide which production technology to use.
   D) governments allocate their resources.

17. In a planned economy, most of the productive resources are owned by:
   A) households.
   B) business firms.
   C) the government.
   D) foreign countries.

18. In a pure market economy, the government's primary roles do NOT include:
   A) protecting property rights.
   B) enforcing contracts between private parties.
   C) providing public goods, such as national defense.
   D) reallocating resources across the economy.
19. Which of the following is part of a planned economy?
   A) Private individuals and firms own most resources.
   B) Product prices are primarily determined by the interaction of demand and supply.
   C) Most of the productive resources are owned by the state.
   D) Consumers are free to decide what goods and services to purchase.

20. In a _____ economy, individuals and firms own most resources, and in a _____ economy, the government controls most resources.
   A) market; planned
   B) planned; socialist
   C) planned; market
   D) socialist; planned

21. The Scandinavian countries of Europe:
   A) have economies coordinate solely by markets.
   B) allow a large role for government services.
   C) have no barriers to the market.
   D) do not protect property rights.

22. In a capitalist economy, the answer to the question “What should be produced?” is determined by:
   A) the government.
   B) consumers' demands for specific goods and services.
   C) producers.
   D) government and producers acting together.

23. The conversion of resources to satisfy wants is described as:
   A) consumption.
   B) distribution.
   C) production.
   D) conservation.

24. Which of these is NOT an economic factor of production?
   A) land
   B) entrepreneurial ability
   C) money
   D) labor
25. Capital, which includes all manufactured products that are used to produce other goods and services, earns:
   A) profit.
   B) wages.
   C) interest.
   D) rent.

26. In economics, the term “land” includes:
   A) mostly agricultural land.
   B) natural resources excluding water resources.
   C) all natural resources.
   D) resources found on the Earth's surface.

27. Economists refer to “rent” as a payment to:
   A) housing.
   B) land.
   C) capital.
   D) labor.

28. The resource known as “labor” includes:
   A) physical labor only.
   B) physical and mental skills and talents.
   C) people willing to do physical and difficult work.
   D) the work of legal workers.

29. The concept of human capital is important to economists because:
   A) improvements to human capital lead to higher standards of living.
   B) it compares people with machinery.
   C) it helps managers plan for future growth.
   D) it shows ways for firms to reduce costs.

30. Human capital is:
   A) the improvement of labor capabilities from training, education, and apprenticeship programs.
   B) the equipment that companies use in the production process.
   C) included in the land resource.
   D) included in entrepreneurial ability.
31. Land as a productive resource does NOT include:
   A) mineral deposits.
   B) oil.
   C) water.
   D) computers.

32. The payment to land is called:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

33. Economists refer to the payment to capital as:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

34. Economists refer to the payment to land as:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

35. The payment to entrepreneurship is called:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

36. Entrepreneurs receive profits for their efforts primarily because they:
   A) combine land, labor, and capital to produce goods and services.
   B) combine land, labor, and capital to produce goods and services and assume the risks associated with business.
   C) assume the risks associated with business.
   D) have the best ideas.
37. In economics, capital refers to:
   A) funds used by businesses to acquire goods and services.
   B) the process of raising money in the stock market.
   C) actual manufactured buildings and equipment used in the production process.
   D) anything that adds to human capital.

38. If a pizza parlor uses an oven in its production process, the oven is an example of which factor of production?
   A) capital
   B) entrepreneurial ability
   C) labor
   D) land

39. Which is an example of capital in the production process of an amusement park?
   A) the electricity used at the park
   B) the mechanics who maintain the equipment
   C) the roller coaster
   D) the ticket-taker

40. Natural resources in the production process are called _____, and their payment is called _____.
   A) capital; rent
   B) labor; interest
   C) land; rent
   D) land; wages

41. What is considered a labor resource?
   A) a sewing machine
   B) a trainee
   C) mineral deposits
   D) a copier

42. Which is considered a land resource?
   A) a sewing machine
   B) an apprentice
   C) mineral deposits
   D) a copier
43. Natural resources such as copper deposits are:
   A) capital.
   B) land.
   C) labor.
   D) investment capital.

44. Which of the following is NOT an example of an improvement to human capital?
   A) students taking a course in economics
   B) increasing the number of machines available to workers
   C) an intensive internship program
   D) an employee learning to use Microsoft Access

45. Land:
   A) is not a scarce resource.
   B) earns rent.
   C) earns interest.
   D) is only agricultural.

46. Capital:
   A) refers to commercial bank-lending policies.
   B) is any manufactured product that is used to produce other products.
   C) is a field of corn.
   D) is the only element that is needed to turn resources into products.

47. Capital includes all of these EXCEPT:
   A) dollar bills in a bank vault.
   B) copy machines in an insurance company.
   C) tractor loaders of a construction firm.
   D) drilling equipment at a tool-and-die company.

48. Which pair does NOT relate?
   A) capital—interest
   B) land—revenue
   C) labor—wages
   D) entrepreneurial ability—profit
49. All of these are considered human capital, EXCEPT:
   A) working in a factory.
   B) obtaining a college education.
   C) receiving training for another area in a current job.
   D) completing a professional development course.

50. Economists refer to the payment to labor as:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

51. In economics, the term "capital" refers to:
   A) money available to firms.
   B) markets where companies go to raise funds.
   C) the primary city in each governmental jurisdiction where most economic activity occurs.
   D) manufactured buildings and equipment used to produce other goods and services.

52. In economics, the payment to capital is called:
   A) wages.
   B) interest.
   C) capitalization.
   D) profit.

53. Which statement about entrepreneurs is NOT correct?
   A) Entrepreneurs combine other resources to produce goods and services.
   B) Entrepreneurs manage the day-to-day marketing, finance, and production decisions.
   C) The payment that entrepreneurs earn is called profit.
   D) Entrepreneurs do not take on any business risks.

54. Entrepreneurs:
   A) take no risks, if they are smart.
   B) earn wages for their work.
   C) combine and manage inputs of land, labor, and capital.
   D) earn rents for their work.
55. _____ combine land, labor, and capital to produce goods and services and assume the risks associated with running businesses.
   A) Economists
   B) Capital marketers
   C) Entrepreneurs
   D) Financiers

56. When an economy is producing the mix of goods and services MOST desired by society, that economy is considered to have:
   A) productive efficiency.
   B) productive equitability.
   C) allocative efficiency.
   D) allocative equitability.

57. When the mix of goods and services produced is just what society desires, then __________ exists.
   A) socialism.
   B) communism.
   C) production efficiency.
   D) allocative efficiency.

58. _____ occurs when goods and services are produced with as few resources as possible, while _____ occurs when the mix of goods and services produced is the most desired by society.
   A) Allocative efficiency; production efficiency
   B) Production efficiency; social efficiency
   C) Allocative efficiency; social efficiency
   D) Production efficiency; allocative efficiency

59. Which statement is TRUE regarding production efficiency?
   A) Efficiency and cost are unrelated concepts.
   B) Production efficiency is independent of the type of technology used.
   C) Producing at the lowest possible resource cost is equivalent to getting as much output as possible from a given set of resources.
   D) The most economically efficient production technology is not always the cheapest.
60. "Production efficiency" is described as:
   A) goods and services that are produced using the fewest resources possible.
   B) the mix of goods and services produced being just what society desires.
   C) one country having a lower opportunity cost of producing a good than another country.
   D) one country being able to produce more of a good than another country.

61. When a society is producing the mix of goods that the society wants to consume, then it is said to have:
   A) solved the economic problem.
   B) an equitable distribution of goods and services.
   C) an efficient form of government.
   D) obtained allocative efficiency.

62. _____ occurs when the mix of goods society decides to produce is produced at the lowest possible resource or opportunity cost.
   A) Allocative efficiency
   B) Production efficiency
   C) Opportunity cost
   D) Cost allocation

63. The production of too many Matchbox cars and not enough Barbie Dolls is an example of:
   A) production inefficiency.
   B) allocative inefficiency.
   C) technical inefficiency
   D) labor inefficiency.

64. When society produces the mix of goods and services that are most desired and produces them at the lowest cost possible:
   A) production efficiency is achieved.
   B) allocative efficiency is achieved.
   C) production and allocative efficiency are achieved.
   D) inefficiency occurs.

65. Which of these items restricts our choices so that we must make tradeoffs?
   A) time and money
   B) money and personal preferences
   C) time and personal preferences
   D) time, money, and personal preferences
66. The graph we could draw to represent the combinations of two goods that are possible within a given society at full employment is a(n):
A) efficiency curve.
B) allocation curve.
C) production possibilities frontier.
D) cost graph.

67. The _____ shows the combination of two goods that are possible for a society to produce at full employment.
A) full employment line
B) production possibilities frontier
C) goods and services frontier
D) maximal productivity curve

68. The derivation of a production possibilities frontier assumes that:
A) some resources are not being used.
B) there is a fixed quantity of resources and technology available.
C) some resources are not being produced efficiently.
D) technology is free.

69. The production possibilities model holds _____ and _____ constant.
A) growth; human capital
B) land; labor
C) labor; capital
D) resources; technology

70. When an economy is operating efficiently, the production of one more unit of a good will result in some loss of production of another good because:
A) technology can only improve the production of one good.
B) the production possibilities frontier (PPF) shifts inward as more of only one good is produced.
C) resources are limited and efficiency implies that all resources are already in use.
D) consumers will not want more of both goods.
71. A point on a nation's production possibilities frontier indicates:
   A) an undesirable combination of goods and services.
   B) combinations of output that are unattainable, given the current stock of resources
      and technology.
   C) levels of production that will cause both unemployment and inflation.
   D) that resources are fully utilized in producing the given combination of goods and
      services.

72. A point to the right of the production possibilities frontier is:
   A) inefficient.
   B) unattainable.
   C) improbable.
   D) efficient.

73. Production levels to the right of the production possibilities frontier are:
   A) attainable.
   B) efficient.
   C) inefficient.
   D) unattainable.

74. Production levels to the left of the production possibilities frontier are:
   A) attainable but efficient.
   B) attainable but inefficient.
   C) unattainable and efficient.
   D) unattainable and inefficient.

75. If an economy is operating at a point that is inside of its production possibilities frontier,
   then it can be assumed that its resources are:
   A) efficiently allocated.
   B) over-utilized.
   C) fully utilized.
   D) underutilized.

76. A country operating outside of the production possibilities frontier is:
   A) operating efficiently.
   B) operating inefficiently and at an unattainable level.
   C) operating inefficiently but in an area that can be attained with proper use of
      resources.
   D) operating impossibly because a country cannot operate outside the production
      possibilities frontier.
77. A change from a technically or productively inefficient mix to an efficient mix of output would BEST be represented with a production possibilities frontier (PPF) as a:
   A) shift outward of the PPF.
   B) shift inward of the PPF.
   C) movement from inside the PPF onto the PPF.
   D) movement from a point on the PPF to a point inside the PPF.

78. If an economy is producing at a point inside its production possibilities frontier:
   A) it is possible to produce more of one good without giving up some of the other good.
   B) it is producing efficiently.
   C) it is producing beyond its production possibilities.
   D) full employment is achieved.

79. Points that are unattainable for an economy are shown as points:
   A) inside the production possibilities frontier.
   B) on the production possibilities frontier.
   C) outside the production possibilities frontier.
   D) of unemployment.

80. Zetaland produces widgets and gadgets. At current levels of output, it can produce more of both. We can conclude that:
   A) Zetaland is at full employment.
   B) opportunity cost is maximized.
   C) some resources are not being used.
   D) the economy is on the production possibilities frontier.
81. (Figure: Production Possibilities) Which statement is NOT correct regarding point X?

A) The combination produced at point X is productively efficient.
B) Society might prefer other combinations on the line to the mix of output at point X.
C) Because it is on the line, combination at point X has no opportunity cost.
D) The combination of output at point X might not be allocatively efficient.

82. Every point on a production possibilities frontier (PPF) represents:

A) production efficiency
B) allocative efficiency.
C) production and allocative efficiency.
D) X-efficiency.
83. (Figure: Tanks and Health Care) Which point in the figure is obtainable but NOT efficient?

A) point a  
B) point b  
C) point f  
D) point g

84. (Figure: Determining Production Possibilities) The graph shows the production possibilities frontier for goods A and B while X marks a combination that:

A) has no opportunity costs.  
B) cannot be obtained even with improvements in technology.  
C) is unobtainable with current resources.  
D) is obtainable if workers work harder.

A)}
85. Each point along a production possibilities frontier represents:
   A) maximum output, given the state of technology and resource availability.
   B) an economically inefficient combination of goods being produced.
   C) a combination of goods that meets the equity criteria.
   D) a combination of goods produced that can never be produced.

86. In the context of the production possibilities frontier, opportunity cost can be measured by the:
   A) ratio of the amounts of the two goods being produced.
   B) slope of the frontier.
   C) ratio of the costs of the two goods being produced.
   D) amount of labor needed to produce the goods and services.

87. A production possibilities frontier with constant opportunity costs is:
   A) convex.
   B) concave.
   C) a straight line.
   D) horizontal.

88. A production possibilities frontier with increasing opportunity costs is:
   A) convex.
   B) bowed.
   C) a straight line.
   D) horizontal.

89. A country operating inside of its production possibilities frontier (PPF) is operating:
   A) efficiently.
   B) inefficiently and at an unattainable level.
   C) inefficiently but in an area that can be attained.
   D) in the unattainable region.

90. Full employment on a production possibilities frontier (PPF) is shown by:
   A) points inside the PPF.
   B) points on the PPF.
   C) points outside the PPF.
   D) an inefficient use of resources.
91. The production possibilities frontier shows:
   A) that unattainable combinations of goods occur inside the curve.
   B) decreasing opportunity costs along the curve.
   C) only two possible combinations of goods an economy can produce at full employment.
   D) all possible combinations of two goods an economy can produce, given its available factors of production and technology.

92. A production possibilities frontier that is a straight line is the result of:
   A) constant opportunity costs.
   B) increasing opportunity costs.
   C) scarcity.
   D) underemployment of resources.

93. A lawyer can argue a case in court for one hour and make $300. She could alternatively use that hour of time to type a legal brief in her office. What is the opportunity cost of her typing the legal brief?
   A) nothing, since she would never type a legal brief
   B) nothing, since she would always hire an administrative assistant to type for her
   C) $300, since that is the amount she could have made by arguing a case in court
   D) There is not enough information in this problem to be able to answer the question.

94. Abdul decided to sleep in rather than attend his 8:30 A.M. economics class. Economists would find this choice:
   A) rational, if Abdul has not missed any other classes.
   B) irrational, because economic analysis suggests you should always attend the classes for which you have paid.
   C) irrational, because oversleeping is not in Abdul's self-interest.
   D) rational, if Abdul values sleep more highly than the benefit he would expect to receive from attending the class.

95. Which statement is NOT an illustration of opportunity cost?
   A) If a person takes a job as long-distance truck driver, he won't have as much time to spend with his family.
   B) If a person studies for her English class, she won't have as much time to write creative poetry.
   C) The more a person works at her job, the more leisure time she has.
   D) If I party every night of the week, my grades at school will drop.
96. If someone accepts a job in Seattle as a financial analyst, he must give up the chance to accept a similar job in Australia. Giving up the job in Australia is his:
   A) allocative cost.
   B) opportunity cost.
   C) production cost.
   D) cost factor.

97. If the government of Spain decides to spend less on the military and more on health care, the forgone spending on military items represents the:
   A) cost factor of the extra health care.
   B) production efficiency of the extra health care.
   C) opportunity cost of the extra health care.
   D) allocative cost of the extra health care.

98. If the total expenses of being a full-time college student for one year adds up $17,000, and that student could have earned $20,000 working full time during the same year, then the student's opportunity cost for the year of college would be:
   A) $3,000.
   B) $37,000.
   C) $20,000.
   D) $17,000.
99. (Figure: Bran Muffins and Corn Flakes PPF) The graph shows the production possibilities frontier for a bakery that makes corn flakes and bran muffins. Which statement is NOT correct?

A) The opportunity cost of increasing production of corn flakes from 200 to 300 pounds is 50 pounds of bran muffins.
B) Due to limited resources, there is a tradeoff between producing corn flakes and bran muffins.
C) The graph implies that resources well-suited for making corn flakes are not as well-suited for producing bran muffins.
D) The company faces decreasing opportunity costs.
100. (Figure: Pork and Corn PPF) When we move from point $b$ to point $c$, the opportunity cost of producing more corn is ______ the opportunity cost of moving from point $d$ to point $e$.

A) greater than  
B) exactly the same as  
C) less than  
D) indeterminately related to

101. When you move from one point to another on the production possibilities frontier (PPF) and the opportunity cost of producing one good in terms of the other good does not change, then the PPF:

A) must be bowed out.  
B) must be bowed in.  
C) must be a straight line.  
D) has an indeterminate shape.

102. (Table) The table shows the production possibilities schedule for guns and butter. As the production of butter increases, the opportunity cost of butter:

<table>
<thead>
<tr>
<th>Guns (hundreds)</th>
<th>6</th>
<th>5</th>
<th>4</th>
<th>3</th>
<th>2</th>
<th>1</th>
<th>0</th>
</tr>
</thead>
<tbody>
<tr>
<td>Butter (tons)</td>
<td>0</td>
<td>5</td>
<td>10</td>
<td>15</td>
<td>20</td>
<td>25</td>
<td>30</td>
</tr>
</tbody>
</table>

A) first rises, then falls.  
B) first falls, then rises.  
C) falls continuously.  
D) remains constant.
103. (Table) The table shows the production possibilities schedule for guns and butter. The opportunity cost of increasing gun production from 100 units to 200 units is:

<table>
<thead>
<tr>
<th>Guns (hundreds)</th>
<th>6</th>
<th>5</th>
<th>4</th>
<th>3</th>
<th>2</th>
<th>1</th>
<th>0</th>
</tr>
</thead>
<tbody>
<tr>
<td>Butter (tons)</td>
<td>0</td>
<td>5</td>
<td>10</td>
<td>15</td>
<td>20</td>
<td>25</td>
<td>30</td>
</tr>
</tbody>
</table>

A) 0 tons of butter.  
B) 5 tons of butter.  
C) 10 tons of butter.  
D) 15 tons of butter.

104. (Table) The table shows coffee and tea units produced for the United States and Japan. If Japan decides to increase production of tea from 20 units to 35 units, the opportunity cost is:

<table>
<thead>
<tr>
<th></th>
<th>United States</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Coffee</td>
<td>25 20 15 10 5 0</td>
<td>Tea</td>
<td>0 2 4 6 8 10</td>
</tr>
<tr>
<td>Japan</td>
<td>Coffee 58 38 25 15 7 0</td>
<td>Tea</td>
<td>0 3 10 20 35 60</td>
</tr>
</tbody>
</table>

A) 15 units of tea.  
B) 10 units of tea.  
C) 8 units of coffee.  
D) 10 units of coffee.

105. (Table) The table shows coffee and tea units produced for the United States and Japan. The opportunity costs are:

<table>
<thead>
<tr>
<th></th>
<th>United States</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Coffee</td>
<td>25 20 15 10 5 0</td>
<td>Tea</td>
<td>0 2 4 6 8 10</td>
</tr>
<tr>
<td>Japan</td>
<td>Coffee 58 38 25 15 7 0</td>
<td>Tea</td>
<td>0 3 10 20 35 60</td>
</tr>
</tbody>
</table>

A) increasing for the United States and Japan.  
B) constant for the United States and Japan  
C) increasing for the United States and constant for Japan  
D) constant for the United States and increasing for Japan.
106. In an eight-hour day, Isabel can produce 15 pounds of taffy or 3 pounds of chocolate chip cookies. In an eight-hour day, Ramona can produce 6 pounds of taffy or 6 pounds of chocolate chip cookies. The opportunity cost of producing 1 pound of chocolate chip cookies is:
A) one-fifth of an hour for Isabel and one hour for Ramona.
B) one hour for Isabel and one hour for Ramona.
C) five pounds of taffy for Isabel and one pound of taffy for Ramona.
D) one-fifth of a pound of taffy for Isabel and one pound of taffy for Ramona.

107. (Table) Given the production possibilities schedule shown in the table, what is the opportunity cost of moving from E to F?

<table>
<thead>
<tr>
<th>Bananas</th>
<th>Apples</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td>12</td>
</tr>
<tr>
<td>F</td>
<td>9</td>
</tr>
<tr>
<td>G</td>
<td>5</td>
</tr>
<tr>
<td>H</td>
<td>0</td>
</tr>
</tbody>
</table>
A) 2 bananas
B) 3 bananas
C) 2 apples
D) 4 apples

108. (Figure: Bread and Honey) As more honey is produced, the opportunity cost of producing honey:

A) decreases.
B) increases.
C) remains constant.
D) is constant for the first 50 jars and then decreases as productive efficiency is achieved.
109. (Figure: Bread and Honey) In the graph, point \( b \) represents:

A) a point of inefficiency.
B) a point where all of society's resources are fully employed.
C) a better economic situation than point \( a \).
D) economic growth.

110. (Figure: Bread and Honey) In the graph, a move from point \( a \) to point \( b \) costs:

A) 70 jars of honey.
B) 75 loaves of bread.
C) 90 loaves of bread.
D) 15 loaves of bread.
111. (Figure: Bread and Honey) Which point in the graph represents unemployed resources?

A) point a  
B) point b  
C) point f  
D) point g

112. (Figure: Bread and Honey) In the graph, a move from point f to point g:

A) is a move from full employment to less than full employment.  
B) is impossible with the resources that are available.  
C) is a move from an inefficient point to one that fully utilizes all the available resources.  
D) reflects a positive opportunity cost tradeoff.
113. (Figure: Bread and Honey) In the graph, a movement from point $f$ to point $g$ could occur if:

A) technological improvements occur.
B) unemployed workers find jobs.
C) people decide they prefer bread to honey.
D) people decide they prefer honey to bread.

114. A production possibilities frontier will have a curved or “bowed out” shape if:

A) opportunity costs are declining.
B) opportunity costs are increasing.
C) resources are scarce.
D) the economy is growing.

115. Increasing opportunity costs occur along the production possibilities frontier because:

A) of unemployment in the economy.
B) not all resources are equally well suited to produce all goods.
C) resources lack specialization.
D) of inequities in the distribution of income.

116. Suppose that in Japan one worker can produce either four cars or five tons of grain per year. What is the opportunity cost of producing one car in Japan?

A) 0.4 ton of grain
B) 0.8 ton of grain
C) 1.25 tons of grain
D) 2.5 tons of grain
117. Which shaped curve reflects the reality that most goods are better suited for specific sorts of production?
   A) A straight line production possibilities frontier
   B) A concave production possibilities frontier
   C) A downward-sloping production possibilities frontier
   D) A convex possibilities frontier

118. If an economy faces increasing opportunity costs with respect to the production of two goods, then the production possibilities frontier between the two goods will be:
   A) bowed inward.
   B) a straight downward-sloping curve.
   C) bowed outward.
   D) a positively sloped curve.

119. If a producer does NOT face increasing opportunity cost, then the production possibilities frontier is:
   A) bowed inward.
   B) a straight downward-sloping curve.
   C) bowed outward.
   D) a positively sloped curve.

120. Which statement BEST illustrates increasing opportunity costs?
   A) As new technology evolves, it becomes more difficult to obtain the energy to run the technology.
   B) Immigration increases the productivity of the labor force even if it costs existing workers their jobs.
   C) The costs of closing factories exceed the profit opportunities of keeping them operating.
   D) As more rice is produced, rice farmers plant in land that is good for growing other crops but poor for growing rice.

121. (Table) The table shows the number of hours Paul spends either reading books or watching movies. Paul only has 10 hours he can use on the activities. If Paul decides to go from spending 2 hours reading books to 4 hours reading books, what is his opportunity cost for watching movies?

<table>
<thead>
<tr>
<th>Books</th>
<th>Movies</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>10</td>
</tr>
<tr>
<td>4</td>
<td>8</td>
</tr>
<tr>
<td>6</td>
<td>6</td>
</tr>
<tr>
<td>8</td>
<td>4</td>
</tr>
<tr>
<td>10</td>
<td>2</td>
</tr>
</tbody>
</table>

   A) 2 hours of movie watching
   B) 4 hours of movie watching
   C) 6 hours of movie watching
   D) 8 hours of movie watching
122. (Table) According to the table, the shape of the production possibilities frontier is:

<table>
<thead>
<tr>
<th>Books</th>
<th>0</th>
<th>2</th>
<th>4</th>
<th>6</th>
<th>8</th>
<th>10</th>
</tr>
</thead>
<tbody>
<tr>
<td>Movies</td>
<td>10</td>
<td>8</td>
<td>6</td>
<td>4</td>
<td>2</td>
<td>0</td>
</tr>
</tbody>
</table>

A) a straight line.
B) bowed.
C) vertical.
D) horizontal.

123. (Table: Production Possibilities Schedule) If the table is graphed, the production possibilities frontier shows:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) constant opportunity costs.
B) increasing opportunity costs.
C) decreasing opportunity costs.
D) a constant slope.

124. (Table: Production Possibilities Schedule) In the table, production of a combination of 3,500 iPads and 1,500 HDTVs:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) is unattainable.
B) wasted resources.
C) is accomplished at full employment.
D) lies outside of the production possibilities frontier.
125. (Table: Production Possibilities Schedule) In the table, a combination of 4,500 iPads and 2,000 HDTVs:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) is unattainable.
B) is a point on the production possibilities frontier.
C) is a point inside of the production possibilities frontier.
D) is accomplished at full employment.

126. (Table: Production Possibilities Schedule) In the table, a combination of 3,500 iPads and 2,000 HDTVs is:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) unattainable.
B) a point inside of the production possibilities frontier.
C) a point outside of the production possibilities frontier.
D) a point on the production possibilities frontier.

127. (Table: Production Possibilities Schedule) In the table, if society wants to increase production of HDTVs from 1,000 units to 2,000 units, the opportunity cost of doing so will be:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) 500 iPads
B) 4,500 iPads.
C) 3,500 iPads.
D) 1,000 iPads.
128. (Table: Production Possibilities Schedule) In the table, if society wants to increase production of HDTVs from 2,000 units to 3,000 units, the opportunity cost of doing so will be:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) 500 iPads  
B) 1,500 iPads.  
C) 1,000 iPads.  
D) 2,000 iPads.

129. (Table: Production Possibilities Schedule) In the table, if society wants to increase production of iPads from 4,500 units to 5,000 units, production of HDTVs will:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) fall to 1,000 units.  
B) increase.  
C) fall to 0 units.  
D) stay the same.

130. (Table) Suppose an economy can produce the combinations of bread and cookies shown in the table. The opportunity cost of increasing bread production from 25 loaves to 50 loaves is _____ and the opportunity cost of increasing bread production from 50 loaves to 75 loaves is _____.

<table>
<thead>
<tr>
<th>Bread</th>
<th>Cookies</th>
</tr>
</thead>
<tbody>
<tr>
<td>(loaves)</td>
<td>(dozens)</td>
</tr>
<tr>
<td>0</td>
<td>100</td>
</tr>
<tr>
<td>25</td>
<td>90</td>
</tr>
<tr>
<td>50</td>
<td>75</td>
</tr>
<tr>
<td>75</td>
<td>45</td>
</tr>
<tr>
<td>100</td>
<td>0</td>
</tr>
</tbody>
</table>

A) 25 loaves of bread; 30 dozen cookies  
B) 15 dozen cookies; 30 dozen cookies  
C) 90 dozen cookies; 45 dozen cookies  
D) 75 loaves of bread; 50 loaves of bread
131. When resources are being used inefficiently, the:
   A) economy is operating at a point outside its production possibility frontier.
   B) production possibility frontier shifts outward.
   C) economy is operating at a point inside its production possibility frontier.
   D) economy is operating at a point on the production possibility frontier.

132. Points inside (below and to the left of) the production possibility frontier are:
   A) attainable and efficient.
   B) unattainable and efficient.
   C) attainable and inefficient.
   D) unattainable and inefficient.

133. When a country is operating at its full potential output, it is producing at a point:
   A) above and to the right of the production possibility frontier.
   B) on the production possibility frontier.
   C) below and to the left of the production possibility frontier.
   D) There is not enough information to answer this question.

134. (Figure: Pork and Corn PPF) Using the graph, if we are operating at the economy's potential output, then production can be at points:

   ![PPF graph with points labeled a, b, c, d, e, f, g, h]

   A) b or h.
   B) c or f.
   C) h or g.
   D) g or d.
135. (Figure: Pork and Corn PPF 2) If we want to produce 10 units of corn, then we can produce no more than _____ unit(s) of pork.

A) 1  
B) 2  
C) 3  
D) 4
136. (Figure: Pork and Corn PPF 2) The opportunity cost of producing a unit of pork is _____ unit(s) of corn.

A) 1  
B) 5  
C) 8  
D) 10

137. A country's GDP is inside the frontier of the production possibilities frontier. This could happen because of:
A) technological change.  
B) a recession.  
C) economic growth.  
D) a lack of land resources.

138. An increase in the quantity and/or quality of labor available could be due to each of the following, EXCEPT:
A) an increase in the working age population.  
B) more women entering the workforce.  
C) strict immigration policy enforcement.  
D) an increase in the college graduation rate.

139. Which is NOT a source of economic growth?
A) increasing business investment  
B) increasing research and development  
C) reducing the level of international trade  
D) reducing the predictability of inflation
140. Which are the principal resources that can be changed through actions taken by the government?
A) capital and entrepreneurial ability
B) capital and labor
C) labor and entrepreneurial ability
D) labor and land

141. If a society's production possibilities frontier shifts to the right:
A) the society's standard of living may increase.
B) the society must choose a different mix of goods.
C) there must be an increase in the production of one industry and a decrease in production in other industries.
D) there must have been an increase in the society's resources.

142. (Figure: Interpreting PPF Shifts) According to the graph, which of the following changes may cause the production possibilities frontier to shift inward from $PPF_1$ to $PPF_0$?
A) increase in the labor force
B) improve the skills of the workers
C) increase government regulation on businesses overall
D) increase in the population
143. (Figure: Interpreting PPF Shifts 2) The graph describes a situation in which:

A) both industries have experienced technological improvements.
B) only Industry 1 has had a technological improvement.
C) neither industry has had a technological improvement.
D) only Industry 2 has had a technological improvement.
144. (Figure: Interpreting PPF Shifts 3) Which statement would NOT be a possible explanation for the shift depicted in the graph?

A) Workers receive more education.
B) New technology is developed.
C) Unemployment rises.
D) New energy resources are found.

145. Which of these can lead to a decrease (leftward shift) in the production possibilities frontier?
A) banning a technology due to its adverse environmental effects
B) a policy encouraging more immigration
C) tax breaks on the adoption of more efficient technologies
D) a policy that encourages entrepreneurship

146. A country can use its given resources to produce capital goods or consumer goods. This implies that:
A) an economy can "have it all."
B) there is a conflict between capitalists and consumers.
C) more consumption in the present leads to higher economic growth for future generations.
D) there is a tradeoff between the current and the future standard of living.
147. Suppose that the government could stimulate spending in one of the following expenditure categories. In which category would the spending increase contribute most to an expansion of the country's production possibilities frontier?
   A) consumption goods
   B) government purchases
   C) net exports
   D) capital goods

148. Which of these would be MOST likely to cause the production possibilities frontier to shift to the left?
   A) an increase in population
   B) an advancement in technology
   C) a decrease in the size of the labor force
   D) a decrease in taxes

149. (Figure: Determining Production Possibilities 2) Which point in the graph is consistent with a recession?

   A) point a
   B) point b
   C) point c
   D) point d

150. Which of these is MOST likely to cause the production possibilities frontier to shift to the right?
   A) an increase in technology
   B) an increase in consumption
   C) an increase in producer prices
   D) an increase in tax revenues
151. Economic growth is shown as a:
   A) shift to the left of the PPF.
   B) shift to the right of the PPF.
   C) an upward movement along the PPF.
   D) a downward movement along the PPF.

152. (Figure: Determining Production Possibilities 3) According to the graph, the output combination represented by the diamond can be achieved only:

   ![Graph with diamond and line]

   A) by reducing immigration.
   B) if the unemployment rate were zero.
   C) if more resources were acquired.
   D) by reducing imports.

153. The increased participation of women in the workforce:
   A) has led to a shift in the structure of the workforce toward services.
   B) has not contributed to the rate of economic growth, because the women have simply shifted from waged work to unwaged work.
   C) has contributed to the rate of economic growth.
   D) shifts the production possibilities frontier curve to the left.

154. Economic growth is shown as a:
   A) leftward shift of the PPF.
   B) movement inside the PPF.
   C) movement along the PPF.
   D) rightward shift of the PPF.
155. Which of these results in a higher standard of living?
   A) higher tax rates
   B) higher inflation rates
   C) higher levels of education
   D) a decrease in trade

156. The two basic determinants of economic growth are _____ and _____.
   A) expanding resources; improving technologies
   B) tariffs; trading with weaker countries
   C) income taxes; human capital
   D) government spending; labor productivity

157. If a nation selects a product mix focused on _____ goods, the production possibilities frontier will expand at a greater rate than if the nation produced mostly _____ goods.
   A) labor-intensive; capital-intensive
   B) consumption; capital
   C) labor-intensive; consumption
   D) capital; consumption

158. Investment in human capital refers to:
   A) education, on-the-job training, and professional training activities.
   B) increasing the machinery and equipment that firms use.
   C) increasing the number of people working at companies.
   D) increasing the financial capital in the economy.

159. Which action will NOT shift a production possibilities frontier curve outward?
   A) increasing the number of workers
   B) increasing worker productivity
   C) shifting preferences of consumers to cheaper products
   D) technological change

160. An increase in technology:
   A) shifts the production possibilities frontier curve outward.
   B) shifts the production possibilities frontier curve inward.
   C) creates unemployment.
   D) decreases inflation.
161. Which of the following does NOT represent an increase in the level of human resources available to an economy?
   A) a decrease in the unemployment rate
   B) immigration
   C) more people entering the labor force
   D) a higher birth rate

162. Which of the following shifts the production possibilities frontier outward?
   A) a decreasing population
   B) capital accumulation
   C) increasing prices
   D) increasing consumption

163. The introduction of the tablet computer to the U.S. economy would BEST be represented with a production possibilities frontier (PPF) as a:
   A) outward shift of the PPF.
   B) inward shift of the PPF.
   C) a movement from inside the PPF onto the PPF.
   D) a movement from a point on the PPF to a point inside the PPF.

164. Increased illegal immigration into the United States would best be represented with a production possibilities frontier (PPF) as a:
   A) outward shift of the PPF.
   B) inward shift of the PPF.
   C) a movement from inside the PPF onto the PPF.
   D) a movement from a point on the PPF to a point inside the PPF.
165. (Figure: Interpreting PFF Shifts 4) The graph depicts the effects of an improvement in technology. One can conclude from the graph that the technology:

![Graph showing technology impact]

A) provided minimal benefit to this society.
B) affected the production of $x$ more than the production of $y$.
C) reduced unemployment.
D) affected the production of $y$ more than the production of $x$.

166. Technological improvements in the U.S. economy have:
A) reduced the costs of production for U.S. companies.
B) increased production levels in the United States.
C) shifted the U.S. production possibilities frontier to the right.
D) resulted in all of these.

167. Which of these is NOT a factor of economic growth?
A) a decrease in the savings rate
B) an increase in the size of the labor force
C) an investment in human capital
D) an increase in the capital stock

168. A study by the Organization for Economic Co-operation and Development (OECD) on factors driving economic growth finds per capita GDP is:
A) unaffected by increases in average education levels.
B) positively affected by increased tax burdens.
C) negatively affected by higher levels of research and development.
D) positively affected by lower inflation rates.
169. Drivers of economic growth include:
   A) specialization but not international trade.
   B) consumption but not specialization.
   C) international trade but not consumption.
   D) specialization, consumption and international trade.

170. In order for a country to experience economic growth, the country must:
   A) reduce output.
   B) increase inputs.
   C) be productively efficient.
   D) be more allocatively efficient.

171. According to the OECD, which of these will lead to an increase in the per capita GDP?
   A) increases in trade barriers
   B) higher taxes
   C) higher prices
   D) increases in business investment

172. Which of these encourages economic growth?
   A) taxes on imports
   B) inflation
   C) education
   D) taxes on income

173. According to the Organisation for Economic Co-operation and Development (OECD), economic growth is driven by:
   A) an increase in trade.
   B) higher levels of inflation.
   C) a decrease in spending on graduate schools.
   D) a decrease in business investment.

174. According to a recent study by the Organization for Economic Co-operation and Development (OECD), which of these results in a higher standard of living (per capita GDP)?
   A) higher inflation rate
   B) greater tax burden
   C) lower inflation rate
   D) smaller level of international trade
175. According to the Organization for Economic Co-operation and Development (OECD), an increase in which of these would lead to a lower rate of per capita growth?
   A) business investment  
   B) research and development  
   C) greater tax burden  
   D) trade

176. The government can make owning a business easier or more profitable by doing all of these EXCEPT:
   A) reducing regulations.  
   B) offering low-interest loans.  
   C) offering favorable tax treatment.  
   D) asking individual investors to take additional risks.

177. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, which changes in production would leave the citizens of Econia with a lower level of welfare or satisfaction?

   A) A movement from C to B.  
   B) A movement from D to E.  
   C) A movement from F to G.  
   D) A movement from B to G.
178. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, assume that the country is producing at point $D$. All of the 300 bales of wheat are eaten but some people remain hungry. Over 100 of the 520 bales of cotton remain unused. Which statement is correct regarding efficiency in Econia?

A) Econia is producing wheat and cotton in amounts that are as efficient as possible.
B) Econia would have greater production efficiency if it moves from $D$ to $B$.
C) Econia is neither productively nor technically efficient.
D) Econia would have greater allocative efficiency if it moves from $D$ to $B$.

179. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, what is the opportunity cost of moving production from point $B$ (350 tons of wheat and 400 bales of cotton) to point $G$ (190 tons of wheat and 700 bales of cotton)?

A) .53 ton of wheat per bale of cotton.
B) 1.875 tons of wheat per bale of cotton.
C) 300 tons of wheat per 160 bales of cotton.
D) 700 bales of cotton per 400 tons of wheat.
180. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, which attainable point would be productively efficient but might be allocatively inefficient?

A) production at point A
B) production at point E
C) production at point C
D) production at point D

181. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, which point would have the greatest level of production inefficiency?

A) production at point A
B) production at point E
C) production at point C
D) production at point F
182. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, imagine that research develops a new hybrid variety of cotton that increases Econia's ability to produce cotton. Which statement would be true?

A) Point A is now attainable because there would be an outward, parallel shift of the PPF.
B) Point G remains on Econia's PPF.
C) Points C, D, and F move from being unattainable to attainable.
D) Point A remains unattainable because the ability to produce wheat is unaffected.

183. The government sets regulations to improve safety for factory workers. This relates to which basic economic question?
A) How much should the government pay?
B) What mix of goods and services should be produced?
C) How should goods and services be produced?
D) Who will receive the goods and services?

184. The government increases taxes on high-income workers to provide welfare to the handicapped who are unable to work. This relates to which basic economic question?
A) What prices should the government pay?
B) What mix of goods and services should be produced?
C) How should goods and services be produced?
D) Who will receive the goods and services?

185. The government bans a toy because it has been associated with injuries to children. This relates to which basic economic question?
A) How much should the government decide?
B) What mix of goods and services should be produced?
C) How should goods and services be produced?
D) Who will receive the goods and services?
186. Society has more influence over the amount and characteristics of _____ than it has over any other resource.
   A) land
   B) labor
   C) capital
   D) entrepreneurial ability

187. Why does society have more influence over the amount and characteristics of capital than it has over any other resource?
   A) There is more capital than any other resource so all or part of it can be used.
   B) Capital is money; more money (currency) can be printed in any denomination.
   C) Capital is the only resource that is manufactured.
   D) Capital never wears out or loses its productivity.

188. The concepts of absolute and comparative advantage were developed by:
   A) Friedrich von Hayek.
   B) David Ricardo.
   C) Gunnar Myrdal.
   D) Paul Samuelson.

189. Which economist is known for first describing "comparative advantage"?
   A) Thomas Malthus
   B) John Stuart Mill
   C) David Ricardo
   D) Adam Smith

190. The theory that suggested that countries would mutually benefit from trade by specializing in export goods they could produce at lower opportunity costs than another country is called:
   A) marginal utility.
   B) labor specialization theory.
   C) absolute advantage.
   D) comparative advantage.

191. Who developed the theory of comparative advantage?
   A) John Stuart Mill
   B) Adam Smith
   C) David Ricardo
   D) Karl Marx
192. David Ricardo would be MOST likely to agree with which statement?
   A) High tariffs on grain are needed to protect the living standards of farmers.
   B) Free trade benefits both trading countries.
   C) If you have an absolute advantage in producing both trousers and beer, you should not trade with other countries.
   D) If you have a comparative advantage in producing both trousers and beer, you should not trade with other countries.

193. David Ricardo:
   A) suggested that increasing wages for workers would increase their consumption and lead to economic growth.
   B) wanted to protect textile markets in England.
   C) suggested that countries would benefit from trade.
   D) suggested that goods were exchanged based on the value of those in use.

194. Free trade is known as a _____ game because ____.
   A) positive-sum; one trader's gain is another's loss
   B) positive-sum; both parties to a transaction can achieve positive gains
   C) zero-sum; one trader's gain is another's loss
   D) zero-sum; both parties to a transaction can achieve positive gains

195. Voluntary trade between nations:
   A) has an outcome with even trade-offs between players.
   B) is a positive-sum game.
   C) is a zero-sum game.
   D) is a negative-sum game.

196. "The economic wealth of this country was built primarily by some individuals profiting from a transaction, whereas others were harmed by that transaction." This statement indicates that its author:
   A) fails to understand the fallacy of composition.
   B) fails to understand that all voluntary trades benefit both parties involved.
   C) fails to understand the significance of the production possibilities frontier.
   D) uses sound economic thinking—the statement is essentially correct.
197. _____ advantage exists when one country can produce more of a good than another country.
   A) Comparative
   B) Absolute
   C) Unfair
   D) Home country

198. If one country has a(n) _____ advantage in the production of one item, it can always produce more of the same item than another nation, given the same resources.
   A) comparative
   B) absolute
   C) special
   D) trade

199. Which statement defines absolute advantage?
   A) Goods and services that are produced at their lowest resource (opportunity) cost.
   B) The mix of goods and services produced is just what the society desires.
   C) One country that has a lower opportunity cost of producing a good than another country.
   D) One country that can produce more of a good than another country if both work with identical resources.

200. Most trade is based on specialization, according to:
   A) brand recognition advantage.
   B) location advantage.
   C) comparative advantage.
   D) absolute advantage.

201. The theory of comparative advantage says that countries:
   A) should restrict trade by cutting off all imports.
   B) should import those goods they can produce at a lower opportunity cost than another country.
   C) can never benefit from specialization in trade.
   D) should export those goods they can produce at a lower opportunity cost than another country.
202. The key to computing comparative advantage is:
   A) calculating the value of the absolute advantage.
   B) a measurement of the opportunity cost.
   C) calculating the cost of production.
   D) computing consumer choice.

203. If a producer has a comparative advantage, then she has selected the activity that:
   A) has the lowest resource cost.
   B) is outside of the production possibilities frontier.
   C) has the lowest opportunity cost.
   D) does not require specialization.

204. Jason produces more jeans than Jasmine. Why would Jason and Jasmine want Jasmine to produce the jeans even when they both know that he can produce more than she can at a faster rate?
   A) Jasmine has a lower opportunity cost of producing the jeans than Jason.
   B) Jason has a lower opportunity cost of producing the jeans than Jasmine.
   C) Jason has an absolute advantage in producing the jeans.
   D) Jasmine has an absolute advantage of producing the jeans.

205. Paolo can walk three dogs or mow two lawns in two hours. Ashanti can walk six dogs or mow three lawns in two hours. One can conclude that:
   A) Ashanti has absolute advantage in lawn-mowing; and Paolo has comparative advantage in dog-walking.
   B) Ashanti has absolute advantage in dog-walking; and Paolo has comparative advantage in lawn-mowing.
   C) Paolo has absolute advantage in lawn-mowing; and Ashanti has comparative advantage in dog-walking.
   D) Paolo has absolute advantage in dog-walking; and Ashanti has comparative advantage in lawn-mowing.

206. Paolo can walk three dogs or mow two lawns in two hours. Ashanti can walk six dogs or mow three lawns in two hours. Ashanti’s opportunity cost for each additional dog walked is:
   A) 0.5 lawn mowed.
   B) 1.5 lawns mowed.
   C) 2.0 lawns mowed.
   D) 2.5 lawns mowed.
207. Paolo can walk three dogs or mow two lawns in two hours. Ashanti can walk six dogs or mow three lawns in two hours. According to trade theory, _____ should walk dogs because _____.
A) Ashanti; she produces more than Paolo does in a two-hour period
B) Ashanti; she enjoys a comparative advantage in dog-walking
C) Paolo; he faces a lower opportunity cost for walking dogs
D) Paolo; he enjoys an absolute advantage in dog-walking

208. The law of comparative advantage suggests that:
A) each country should strive to produce roughly equal amounts of all goods.
B) nations can benefit if they trade with each other.
C) free trade among nations is generally harmful to an economy.
D) each country should strive to be self-sufficient.

209. Comparative advantage arises because:
A) all resources are equally effective in the production of goods.
B) the division of labor increases efficiency.
C) the division of labor helps markets function effectively.
D) not all resources are equally effective in the production of goods.

210. Suppose the country of Alphaland can produce more cars than Omegaland can produce, given the same resources. An economist would conclude that Alphaland has a(n) _____ in producing cars.
A) absolute advantage
B) comparative advantage
C) higher opportunity cost
D) higher resource cost

211. Suppose that if the United States produced only oil, it could produce 25 million barrels; and if it produced only microchips it could produce 20 million chips. Suppose that if Mexico produced only oil, it could produce 16 million barrels; and if it produced only microchips, it could produce 8 million chips. Which statement is then correct?
A) Mexico has a comparative advantage in producing both goods.
B) The United States has an absolute advantage over Mexico in producing both goods.
C) Mexico has an absolute advantage over the United States in producing both goods.
D) The United States has a comparative advantage in producing both goods.
212. Which situation would MOST likely lead to an import of copper into a certain country?

A) a tariff placed on copper
B) an absolute disadvantage in the production of copper compared to other nations
C) an absolute advantage in the production of copper by other nations
D) a comparative advantage in the production of copper by other nations

213. Comparative advantage exists when one country can produce:

A) more of a good than can another country.
B) less of a good than can another country.
C) a good at a higher opportunity cost than another country.
D) a good at a lower opportunity cost than another country.

214. To gain from trade, a country should:

A) always try to get a favorable tariff.
B) specialize in the commodity for which it has a comparative advantage.
C) always specialize in the commodity for which it has an absolute advantage.
D) trade only with its political allies.

215. If a country has few resources:

A) trade will never occur.
B) trade will not increase the GDP.
C) it will still have a comparative advantage in a good or service.
D) specialization would be useless.

216. International trade:

A) increases consumer prices.
B) increases consumption possibilities.
C) reduces production possibilities.
D) reduces resource consumption.

217. (Table) If Germany decided to produce skirts, what is Germany's opportunity cost?

<table>
<thead>
<tr>
<th></th>
<th>Sweaters</th>
<th>Skirts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Germany</td>
<td>6</td>
<td>12</td>
</tr>
<tr>
<td>Greece</td>
<td>4</td>
<td>20</td>
</tr>
</tbody>
</table>

A) 2 sweaters
B) 0.5 of a sweater
C) 1 sweater
D) 0.25 of a sweater
218. (Table) Germany has a comparative advantage in producing:

<table>
<thead>
<tr>
<th></th>
<th>Sweaters</th>
<th>Skirts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Germany</td>
<td>6</td>
<td>12</td>
</tr>
<tr>
<td>Greece</td>
<td>4</td>
<td>20</td>
</tr>
</tbody>
</table>

A) sweaters and skirts.
B) sweaters only.
C) skirts only.
D) neither good.

219. (Table) Greece has a comparative advantage in:

<table>
<thead>
<tr>
<th></th>
<th>Sweaters</th>
<th>Skirts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Germany</td>
<td>6</td>
<td>12</td>
</tr>
<tr>
<td>Greece</td>
<td>4</td>
<td>20</td>
</tr>
</tbody>
</table>

A) sweaters and skirts.
B) sweaters only.
C) skirts only.
D) neither good.

220. Two countries will benefit from trade if:

A) each country has a higher opportunity cost of producing the traded good.
B) each country has a lower opportunity cost of producing the traded good.
C) each country has an absolute advantage of producing the good.
D) one country does not produce the traded good.

221. The United States can grow a greater total quantity of wheat than Japan. The United States has a(n) _____ in wheat production.

A) higher opportunity cost
B) comparative advantage
C) absolute disadvantage
D) absolute advantage
222. (Figure: Ships and Autos in Countries A and B) Two countries manufacture automobiles and ships. Based on the graphs, which statement is correct?

Country A

- A) The opportunity cost in Country A of producing 1 ship is 2 cars.
- B) The opportunity cost in Country B of producing 1 ship is 10 cars.
- C) Country B is more efficient in the production of ships.
- D) Both countries are equally efficient in the production of ships because the PPFs are linear.
223. (Figure: Ships and Autos in Countries A and B) Two countries manufacture automobiles and ships. Based on the graphs, which statement is correct?

A) Country A has a comparative disadvantage in producing ships.
B) The two countries should not trade with each other because both can produce both goods.
C) Country B has an absolute advantage in both goods because the line is closer to the origin.
D) Country A has an absolute advantage in producing ships.
224. (Figure: Ships and Autos in Countries A and B) Two countries manufacture automobiles and ships. Based on the graphs:

A) Country A should specialize in automotive manufacturing and Country B should specialize in ship building.
B) There are no advantages to trade because Country A can produce more of both goods.
C) There are no advantages to trade because the lines are downward sloping.
D) Country A should specialize in ship building and Country B should specialize in automotive manufacturing.
225. (Figure: Corn and Oil in the United States and the United Kingdom) Refer to the graphs for the United States and the United Kingdom. If the starting point is point a, what is the opportunity cost of the United Kingdom producing one more barrel of oil?

- **United States**
  - Corn | Oil
  - 50   | 0
  - 0    | 50
  - 25   | 25

- **United Kingdom**
  - Corn | Oil
  - 0    | 4
  - 2    | 0
  - 1    | 2

A) 0.5 bushel of corn  
B) 1 bushel of corn  
C) 1.5 bushels of corn  
D) 2 bushels of corn
226. (Figure: Corn and Oil in the United States and the United Kingdom) Refer to the graphs for the United States and the United Kingdom. If the starting point is point $a$, what is the opportunity cost of the United States producing 15 more barrels of oil?

**United States**

<table>
<thead>
<tr>
<th>Corn</th>

A) Mexico has better trade routes north to Canada.
B) Canada sees this tradeoff as a form of charity.
C) Comparative advantage allows both countries to specialize in the items for which they have the lowest opportunity cost and allows for mutual benefits.
D) Canada is hoping to tax the oil heavily as it is imported.
233. (Figure: Turtletopia and Frogland PPFs) _____ has the absolute advantage for producing corn; and _____ has the absolute advantage for producing pork.

A) Turtletopia; Turtletopia  
B) Frogland; Frogland  
C) Turtletopia; Frogland  
D) Frogland; Turtletopia
234. (Figure: Turtletopia and Frogland PPFs) _____ has the comparative advantage for producing corn; and _____ has the comparative advantage for producing pork.

A) Turtletopia; Turtletopia
B) Frogland; Frogland
C) Turtletopia; Frogland
D) Frogland; Turtletopia
235. (Figure: Turtletopia and Frogland PPFs) We see that the two countries _____ benefit from trade, and that Frogland should specialize in producing _____ while Turtletopia should specialize in producing _____.

A) would not; both products for their own use; both products for their own use
B) would; neither good; both goods
C) would; corn; pork
D) would; pork; corn
236. (Table) Given the production possibilities schedules for the United States and Chile, which product should Chile produce if it is to produce the good for which it has a comparative advantage?

**U.S. Production Possibilities**

</table>

A) Both countries are better off from this trade because they both consume outside their production possibilities frontier (PPF).
B) Both countries are better off from this trade because they both produce outside their PPF.
C) Only the United States is better off from this trade.
D) Only Chile is better off from this trade.

239. Suppose the United States must give up the production of one gallon of paint to produce one pair of shoes. Mexico must give up two gallons of paint to produce one pair of shoes. According to the principle of comparative advantage:

A) there are no benefits to specialization and trade.
B) Mexico should specialize in producing paint, the United States should specialize in producing shoes.
C) Mexico should specialize in producing shoes, the United States should specialize in producing paint.
D) the United States should produce both goods because it has an absolute advantage in both products.
240. (Figure: Wheat and Autos in the United States and South Korea) According to the graph, for every extra:

A) bushel of wheat the United States wants to produce, it must give up 100 cars.
B) car South Korea wants to produce, it must give up 40,000 bushels of wheat.
C) car the United States wants to produce, it must give up 100 bushels of wheat.
D) car South Korea wants to produce, it must give up half a bushel of wheat.

241. (Figure: Wheat and Autos in the United States and South Korea) According to the graph:

A) the United States should import cars and export wheat.
B) the United States should produce both products because it has an absolute advantage in both.
C) the United States should export cars and import wheat.
D) South Korea should produce neither product because it does not possess an absolute advantage in either.
Looking at Greg and Melissa's production possibilities frontiers (PPFs), what production and trade situation would allow *both* Greg and Melissa to consume a combination of biscuits and cookies outside their PPF?

A) Greg produces 200 cookies, Melissa produces 160 biscuits, and Greg trades 100 cookies in exchange for 30 biscuits.
B) Greg produces 200 cookies, Melissa produces 160 biscuits, and Greg trades 100 cookies in exchange for 60 biscuits.
C) Greg produces 100 biscuits, Melissa produces 80 cookies, and Greg trades 50 biscuits in exchange for 40 cookies.
D) Greg produces 100 biscuits, Melissa produces 80 cookies, and Greg trades 50 biscuits in exchange for 70 cookies.
243. (Figure: Biscuits and Cookies PPFs) Greg and Melissa face the production possibilities frontiers shown for biscuits and cookies. When Greg completely specializes in producing the good he has a comparative advantage in, he produces:

A) 100 biscuits and 200 cookies.
B) 0 biscuits and 200 cookies.
C) 50 biscuits and 100 cookies.
D) 100 biscuits and 0 cookies.

244. (Figure: Biscuits and Cookies PPFs) Greg and Melissa face the production possibilities frontiers shown for biscuits and cookies. When Melissa completely specializes in producing the good she has a comparative advantage in, she produces:

A) 160 biscuits and 80 cookies.
B) 0 biscuits and 80 cookies.
C) 80 biscuits and 40 cookies.
D) 160 biscuits and 0 cookies.
245. (Figure: Biscuit and Cookies PPFs) Greg and Melissa face the production possibilities frontiers shown for biscuits and cookies. Assume that Greg and Melissa trade 60 biscuits for 60 cookies after they have completely specialized in producing the good in which they have a comparative advantage. We know that Greg and Melissa are each made better off with specialization and trade than acting alone because:

A) they are both producing outside of their production possibilities frontier.
B) they are both consuming outside of their production possibilities frontier.
C) Greg is producing outside of his production possibilities frontier.
D) Melissa is producing outside of her production possibilities frontier.

![Graph showing production possibilities frontiers for Greg and Melissa.]

246. The key benefit of countries engaging in trade based on comparative advantage is that:

A) both countries will be able to consume more than they would with no trade.
B) it allows countries to produce efficiently inside of their individual production possibilities frontiers.
C) it allows both countries to maximize their opportunity cost.
D) None of these is a key benefit.

247. According to the law of comparative advantage, when one country sells goods for which it has the comparative advantage in production and buys goods for which it does not have the comparative advantage in production:

A) total output will fall.
B) buyers of goods will win and sellers of goods will lose.
C) total output to each person can be expanded.
D) sellers of goods will win and buyers of goods will lose.
248. If a country wants to maximize its GDP, it should always:
A) export goods in which it has an absolute advantage.
B) import goods in which it has an absolute advantage.
C) export goods in which it has a comparative advantage.
D) import goods in which it has a comparative advantage.

249. Trade can be beneficial to society as a whole because it allows:
A) for a more efficient use of resources.
B) for goods to be obtained at a lower opportunity cost.
C) people to specialize in activities in which they have a comparative advantage.
D) All of these make trade beneficial to society as a whole.

250. When two countries gain from trade:
A) one country must have an absolute advantage over the other in producing all goods.
B) both countries can consume beyond their domestic production possibilities frontiers.
C) one country must have a comparative advantage over the other in producing all goods.
D) both countries must be equal in size.

251. Which of these does NOT impose a limit on the amount of international trade?
A) transportation costs
B) some industries losing their domestic markets
C) the danger of overreliance on a small number of products for exports
D) high level of comparative advantage

252. One of the major limits to trade is:
A) transaction costs.
B) comparative advantage.
C) opportunity costs.
D) absolute advantage.

253. The practical constraints on trade include all of these EXCEPT:
A) every international transaction involves costs.
B) production possibilities frontiers for nations are linear.
C) production possibilities frontiers exhibit increasing costs and diminishing returns.
D) some industries and individuals in a country may be hurt by an expansion of trade.
254. The limits on international trade include all of these EXCEPT:
   A) transportation and communication costs.
   B) increasing opportunity costs and diminishing returns.
   C) decreasing opportunity costs and increasing returns.
   D) Trade may hurt some industries and individuals within each country.

255. What is one of the risks involved in complete specialization?
   A) Economic growth fosters poor moral standards.
   B) Specialization in agricultural products can lead to devastation due to rapid fluctuations in the weather.
   C) Educational opportunities may be narrowed.
   D) Living standards may decrease.

256. Which of these is among the top five U.S. exports to China?
   A) furniture
   B) toys
   C) soybeans
   D) accounting services

257. Which of these is one of China's top five exports to the United States?
   A) furniture
   B) cars
   C) soybeans
   D) accounting services

258. (Table) According to the data in the table, who has an absolute advantage in the production of shirts?

<table>
<thead>
<tr>
<th></th>
<th>Hours to Produce a Shirt</th>
<th>Hours to Produce a Cake</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tom</td>
<td>5</td>
<td>3</td>
</tr>
<tr>
<td>Joe</td>
<td>6</td>
<td>4</td>
</tr>
</tbody>
</table>

   A) Tom, because he can produce more shirts in a week than Joe can
   B) Joe, because he can produce more shirts in a week than Tom can
   C) Tom, because he cannot produce as many shirts as Joe can
   D) Joe, because he cannot produce as many shirts as Tom can
259. (Table) According to the data in the table, which statement explains who has a comparative advantage in the production of shirts?

<table>
<thead>
<tr>
<th>Hours to Produce a Shirt</th>
<th>Hours to Produce a Cake</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tom</td>
<td>5</td>
</tr>
<tr>
<td>Joe</td>
<td>6</td>
</tr>
</tbody>
</table>

A) Tom, because he can produce a shirt in fewer hours than Joe can  
B) Joe, because he uses more hours than Tom to produce a shirt  
C) Tom, because he gives up production of 1.67 cakes for every shirt he produces  
D) Joe, because he gives up production of 1.5 cakes for every shirt he produces

260. (Table) Looking at the data for Tom and Joe, what specialization pattern will exist if trade is based on comparative advantage?

<table>
<thead>
<tr>
<th>Hours to Produce a Shirt</th>
<th>Hours to Produce a Cake</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tom</td>
<td>5</td>
</tr>
<tr>
<td>Joe</td>
<td>6</td>
</tr>
</tbody>
</table>

A) Tom will specialize in shirts and Joe will specialize in cakes.  
B) Tom will specialize in cakes and Joe will specialize in shirts.  
C) Tom will specialize in both cakes and shirts.  
D) Joe will specialize in both cakes and shirts.

261. Can a country have a comparative advantage in producing a good without also having an absolute advantage in producing that good?

A) No, it can't because comparative advantage grows out of absolute advantage.  
B) No, it can't because they are different terms for the same concept.  
C) Yes, it can because comparative advantage is based upon being able to produce more and absolute advantage is not.  
D) Yes, it can because each type of advantage has a different basis.

262. Imagine two countries with identical endowments of resources. Using all its resources, Broland can produce 5,000 books or 8,000 forks. Using the same resources, Nomia can produce 4,000 books or 7,000 forks. Which country has a comparative advantage producing books?

A) Broland, because it gives up 0.63 of a fork for each book produced  
B) Nomia, because it gives up 0.57 of a fork for each book produced  
C) Broland, because it gives up 1.6 forks for each book produced  
D) Nomia, because it gives up 1.75 forks for each book produced
263. Imagine two countries with identical endowments of resources. Using all its resources, Broland can produce 5,000 books or 8,000 forks. Using the same resources, Nomia could produce 4,000 books or 7,000 forks. Which country has a comparative advantage producing forks?
   A) Broland, because it gives up 0.63 of a book for each fork produced
   B) Nomia, because it gives up 0.57 of a book for each fork produced
   C) Broland, because it gives up 1.6 books for each fork produced
   D) Nomia, because it gives up 1.75 books for each fork produced

264. Assume that Australia has a comparative advantage over France in the production of pencils, and that France has a comparative advantage over Australia in the production of haircuts. What is a practical reason why Australia and France might NOT trade?
   A) The high transportation costs for travel between the countries might discourage trade in haircuts.
   B) Given current communication technologies, it is unlikely that people in one country could learn of the hairstyles available in the other country.
   C) Pencils are very fragile and are likely to be damaged during shipment.
   D) Australian pencil makers might resist the import of pencils into Australia even though comparative advantage indicates Australia should import pencils.

265. Which of the following is NOT a benefit to a country that comes from trade based upon comparative advantage?
   A) The country is able to consume a combination of goods outside its production possibilities frontier.
   B) The country may be able to adopt technologies that have been developed abroad.
   C) The country reduces its risk of being dependent on trading partners for certain goods.
   D) Efficiency in production will be high due to specialization.

266. “How goods and services are advertised” is one of the three basic economic questions that each society must answer.
   A) True
   B) False

267. The "what" question of the three basic questions is "What price should be charged for a good?"
   A) True
   B) False
268. Distribution refers to the way an economy allocates to consumers the goods and services it produces.
   A) True
   B) False

269. In a capitalist society, consumers signal what products they want by their demands.
   A) True
   B) False

270. Another term for “market economy” is “capitalist economy.”
   A) True
   B) False

271. Only capitalist economies must answer the three basic economic questions.
   A) True
   B) False

272. Natural resources, such as water, are included in capital resources.
   A) True
   B) False

273. As used by economists, the term “capital” includes the human talent one is born with.
   A) True
   B) False

274. Economists include mineral deposits, oil, natural gas, and water in their definition of land.
   A) True
   B) False

275. Natural resources in the production process are called land and their payment is called interest.
   A) True
   B) False
276. Labor as a factor of production includes the mental but not physical talents of people.
   A) True
   B) False

277. Capital, as a factor of production, includes all manufactured products that are used to produce other goods.
   A) True
   B) False

278. Entrepreneurs combine land, labor, and capital to produce goods and services.
   A) True
   B) False

279. In economics, “capital” refers to a company's money resources.
   A) True
   B) False

280. Capital refers to the total amount of money in hedge and “venture capital” funds.
   A) True
   B) False

281. Water is included in the definition of land.
   A) True
   B) False

282. Allocative efficiency ensures that the goods and services demanded by society are produced.
   A) True
   B) False

283. If a firm produces its mix of output at the lowest possible cost, it is said to have achieved production efficiency.
   A) True
   B) False
284. “Production efficiency” is defined as producing the mix of goods and services most desired by society.
   A) True
   B) False

285. When the mix of goods and services produced is the mix most desired by society, the result is called allocative efficiency.
   A) True
   B) False

286. The production possibilities frontier (PPF) graphically represents the combinations of two goods that are possible for a society to produce at full employment.
   A) True
   B) False

287. The production possibilities frontier shows the combinations of output that are both attainable and unattainable.
   A) True
   B) False

288. An increase in the unemployment rate will shift the production possibilities frontier to the right.
   A) True
   B) False

289. Any point inside the production possibilities frontier represents an output combination produced at full employment.
   A) True
   B) False

290. All output combinations on the production possibilities frontier are attainable.
   A) True
   B) False

291. Opportunity cost applies only to personal purchasing decisions.
   A) True
   B) False
292. An example of the application of opportunity cost occurs when a government makes the choice between health care spending and military spending.
   A) True
   B) False

293. Employing resources that are not as well-suited to making a particular product decreases the opportunity cost of producing that product as opposed to other products.
   A) True
   B) False

294. A production possibilities frontier will have a curved or “bowed out” shape if opportunity costs are increasing.
   A) True
   B) False

295. (Figure: Tanks and Health Care) At point f, in order to produce more tanks, society must give up a certain amount of health care services.
   A) True
   B) False
296. (Figure: Tanks and Health Care) The tradeoff in moving from point $a$ to point $c$ is represented by a gain of $50$ million in health care services and a loss of $2,000$ tanks.

\[ \text{(A) True} \]
\[ \text{(B) False} \]

297. (Figure: Tanks and Health Care) The opportunity cost of moving from point $c$ to point $b$ is about $50$ million in health care services.

\[ \text{(A) True} \]
\[ \text{(B) False} \]
298. As it relates to the production possibilities frontier, an increase in technology for one good while holding all else constant will cause a complete outward shift of the production possibilities frontier.
   A) True
   B) False

299. (Figure: Pork and Corn PPF) It is possible to produce 15 units of corn and 4 units of pork at the same time.

   A) True
   B) False
300. (Figure: Pork and Corn PPF) Economists can unequivocally tell which point of production is ideal.

A) True  
B) False

301. The production possibilities frontier is bowed outward as a result of increasing costs.

A) True  
B) False

302. The choice to attend a free college lecture involves no opportunity cost.

A) True  
B) False

303. There is no opportunity cost involved when the government decides to cut federal taxes.

A) True  
B) False

304. The idea that resources are specialized is the reason for increasing opportunity costs.

A) True  
B) False

305. Immigration, both legal and illegal, is a component of America's economic growth.

A) True  
B) False
306. A nation that consumes most of what it produces will have a lower growth rate than another nation that focuses more on the production of capital goods.
   A) True
   B) False

307. If a society's production possibilities frontier shifts to the right, the society's standard of living will likely increase.
   A) True
   B) False

308. Labor and entrepreneurial ability are the principal resources that can be changed through government action.
   A) True
   B) False

309. Technological improvements in one industry never allow other industries to increase their production with existing resources.
   A) True
   B) False

310. Adam Smith is credited with being the first to define the concept of comparative advantage.
   A) True
   B) False

311. Free trade is known as a positive-sum game because both parties to a transaction can receive positive gains.
   A) True
   B) False

312. A country has to be able to produce both goods at a faster rate in order to have an absolute advantage.
   A) True
   B) False
313. *Absolute advantage* is defined as when goods and services are produced at their lowest resource (opportunity) cost.
   A) True
   B) False

314. If one country has an absolute advantage over another country in producing all goods, the countries will not gain from trading.
   A) True
   B) False

315. (Figure: Turtletopia and Frogland PPFs) Turtletopia has the absolute advantage in producing both corn and pork.

   A) True
   B) False

316. A country is said to have an absolute advantage if it can produce more of a good than another country can.
   A) True
   B) False

317. One country has a comparative advantage in producing a good if its opportunity cost to produce that good is lower than that of another country.
   A) True
   B) False
318. A country should always produce the items in which it has an absolute advantage.
   A) True
   B) False

319. If there are two goods and two countries, then one country can have both an absolute and a comparative advantage in both goods.
   A) True
   B) False

320. If countries specialized and then traded, world production would increase.
   A) True
   B) False

321. Comparative advantage stems from differences in the relative costs of producing goods and services.
   A) True
   B) False

322. If the United States has a comparative advantage over France in producing corn, the opportunity cost of the United States producing corn is lower than France’s opportunity cost of producing corn.
   A) True
   B) False

323. If the United States has absolute advantages in producing wheat and automobiles, it should never trade with other countries that produce wheat and automobiles.
   A) True
   B) False

324. Every industry in all countries benefit from increased international trade.
   A) True
   B) False

325. The effects of North American Free Trade Agreement (NAFTA) have proven that opening up to free trade will hurt domestic workers in every industry in the U.S.A.
   A) True
   B) False
326. Free trade and the law of comparative advantage increase the standard of living for each person in a country.
   A) True
   B) False

327. If two countries can benefit by trading with each other, no industries in either country may suffer.
   A) True
   B) False

328. Industries at a comparative disadvantage may find it necessary to decrease their workforce.
   A) True
   B) False

329. Much of the economic growth we have seen over the past century has been due to population growth.
   A) True
   B) False

330. The United States imports more electrical goods from China than it exports to China.
   A) True
   B) False

331. Describe the three basic questions that must be answered for any economy; and provide explanations for each question for both capitalist and more government-controlled economies.

332. Explain how a free market economy decides what to produce.

333. Briefly describe the four types of resources used in production.

334. In a movie theater, what product is produced? Give an example of capital used in the production process.
335. Suppose you are a restaurant owner. What is your output? What resources do you need and how would you classify them under the four categories?

336. Compare and contrast the two types of capital discussed in the textbook. When economists refer to capital, which type do they mean?

337. Describe the role entrepreneurs play in a capitalistic economy.

338. Can a productively efficient economy be allocatively inefficient? Explain.

339. Explain the differences between production and allocative efficiency.

340. (Figure: Tanks and Health Care) Refer to the graph and table and calculate the opportunity costs of moving from points $a$ to $b$, $b$ to $c$, and $c$ to $d$.

<table>
<thead>
<tr>
<th>Point</th>
<th>Health Care (millions)</th>

343. Describe how expansion of resources and technological improvements can cause economic growth.

344. Describe how technological improvements in communication lead to increased growth in other industries without additional resources.

345. Explain one strategy that a government can follow to promote economic growth.

346. What can governments do to increase economic growth?
347. There is much debate regarding immigration into the United States. Using a production possibilities frontier graph, show what would happen if all immigration were halted.

348. Economists maintain that there is a tradeoff between current consumption and future consumption. Explain what they mean.

349. Compare and contrast absolute and comparative advantages.

350. Isabel can bake six cakes or 240 muffins in an eight-hour day. Pawel can bake 12 cakes or 360 muffins in an eight-hour day. Who has a comparative advantage in cakes, and what is his or her opportunity cost of producing one additional cake?

351. Explain why Country 1, which has an absolute advantage over Country 2 in producing two products (e.g., corn and clothing), would trade with Country 2.

352. Why would it be risky for Haiti to specialize in sugar cane production even if it has a comparative advantage in this area over most other countries?

1. Which of these questions would NOT be considered one of the basic economic questions?
   A) Should Brazil continue to produce ethanol?
   B) What production method should be used to make batteries for plug-in cars?
   C) When will the new high-speed train in California be completed?
   D) To whom will the production of solar panels be sold to?

2. What does the term “laissez-faire” mean in economics?
   A) Government plays a major role regulating businesses to protect consumers.
   B) Government does not intervene in personal decisions but it controls economic decisions.
   C) The market economy requires intervention to ensure efficiency.
   D) The role of government should be as minimal as possible.

3. Which of these would NOT be considered a factor of production?
   A) mineral deposits
   B) a large copy machine at the office
   C) college graduates seeking a job
   D) a bank loan used to start a new business

4. China produces many products at the lowest cost possible, even though Chinese consumers do not desire many of these products (e.g., football helmets). China is achieving:
   A) production efficiency only
   B) allocative efficiency only
   C) both production efficiency and allocative efficiency
   D) neither production efficiency nor allocative efficiency

5. Why is entrepreneurial ability considered a factor of production?
   A) because it is a physical input such as land, labor, and capital
   B) because entrepreneurs assume the risk of producing output, an important part of the production process
   C) because entrepreneurs work very long hours and demand large profits for the work that they accomplish
   D) because it is an input that can be used by itself to produce many goods and services desired by society
6. (Figure) What would be a reason why an economy is operating at point $D$?

A) A reduction in business investment causes unemployment to increase.
B) There is a new technological breakthrough in the production of energy-efficient airplanes.
C) An economy uses all of its inputs efficiently but changes the ratio of the goods produced.
D) An economy experiences an influx of immigrants seeking jobs.

7. (Figure) The area between which two points on the production possibilities frontier could represent an improvement in productive efficiency?

A) from $A$ to $B$
B) from $B$ to $C$
C) from $C$ to $B$
D) from $D$ to $B$
8. (Figure) The area between which two points on the PPF could represent an improvement in allocative efficiency?

A) from A to B  
B) from A to C  
C) from B to C  
D) from B to D

9. Which of these would be least likely to increase economic growth?
   A) An increase in investment in infrastructure such as new roads and rail lines.
   B) An increase in tariffs to protect domestic industries from foreign competition.
   C) An expansion of financial aid options to college students.
   D) Protecting intellectual property rights (such as patents) to provide incentives for innovation.

10. The main reason why a production possibilities frontier would have a concave shape is:
    A) because of decreasing opportunity costs  
    B) because the rate at which one good can be substituted for another is fixed.  
    C) because as a country specializes in one product, it must give up more of the other.  
    D) because consumers face diminishing marginal returns in consumption.

11. If a farmer can grow 100 tubs of grapefruit or 250 tubs of oranges per acre of land, what is the opportunity cost of growing one orange?
    A) 0.4 of an orange  
    B) 0.4 of a grapefruit  
    C) 2.5 oranges  
    D) 2.5 grapefruits
12. For a country to have a comparative advantage in a good, it must have:
   A) more labor to produce that good
   B) more capital to produce that good
   C) an ability to produce more of that good than another country has
   D) a lower opportunity cost of producing that good

13. Which of the following is not possible for two countries who trade computers and automobiles with one another?
   A) One of the countries has an absolute advantage in the production of both products.
   B) One of the countries has a comparative advantage in the production of both products.
   C) One country has an absolute advantage in one product and a comparative advantage in the other product.
   D) One country does not have an absolute advantage in either product but has a comparative advantage in one product.

14. Suppose that Costa Rica is able to produce 50,000 pounds of coffee or 10,000 medical devices per day; Vietnam is able to produce 40,000 pounds of coffee or 5,000 medical devices per day. Which statement is TRUE?
   A) Costa Rica has an absolute advantage in medical device production, while Vietnam has an absolute advantage in coffee production.
   B) Costa Rica has a comparative advantage in the production of both coffee and medical devices.
   C) Costa Rica has a comparative advantage in coffee production, while Vietnam has a comparative advantage in the production of medical devices.
   D) Costa Rica has a comparative advantage in the production of medical devices, while Vietnam has a comparative advantage in coffee production.

15. Using the productivity rates for Spain and Portugal, which statement is TRUE?

<table>
<thead>
<tr>
<th>Country</th>
<th>Oranges</th>
<th>Olives</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spain</td>
<td>500</td>
<td>250</td>
</tr>
<tr>
<td>Portugal</td>
<td>400</td>
<td>100</td>
</tr>
</tbody>
</table>

A) Spain has a comparative advantage in olives.
B) Portugal has a comparative advantage in olives.
C) Both Portugal and Spain have a comparative advantage in oranges.
D) Both Spain and Portugal have a comparative advantage in olives.
Answer Key

1. C 
2. D 
3. D 
4. A 
5. B 
6. A 
7. D 
8. C 
9. B 
10. C 
11. B 
12. D 
13. B 
14. D 
15. A
1. Trade is:
   A) a way for rich countries to take advantage of poorer countries.
   B) good for rich countries and bad for poorer countries.
   C) something that slows down the economies of the trading countries.
   D) a driver of economic growth.

2. Which is NOT one of the three basic economic questions that each society must answer?
   A) What goods and services are to be produced?
   B) How are the goods and services to be produced?
   C) Who decides what goods and services are in demand?
   D) Who will receive the goods and services?

3. Which is NOT considered a basic economic question?
   A) How will the system accommodate change?
   B) What goods and services will be produced?
   C) Who will receive the goods and services?
   D) How will these goods and services be produced?

4. To answer the question of how goods and services are to be produced, society must decide:
   A) what products businesses want to produce.
   B) how to combine its scarce resources to produce the desired products.
   C) what products the government wants.
   D) what products to export.

5. The “what” question primarily refers to:
   A) the mix of goods and services that are produced.
   B) production efficiency.
   C) whether the goods and services are produced under a communist system or a democratic system.
   D) who gets the goods and services.

6. Which is NOT a basic economic question that societies must answer?
   A) What goods and services are to be produced?
   B) How are the goods and services to be produced?
   C) Why are these goods and services being produced?
   D) For whom are the goods and services being produced?
7. What are the three basic economic questions each society must answer?
   A) what to produce; how to produce; for whom to produce
   B) how much to produce; what quality to produce; what price to sell at
   C) what to produce; how to much to produce, how to consume
   D) how much goes to government; how much goes to consumers; how much is exported

8. Which is NOT one of the basic economic questions that each society must answer?
   A) What goods and services are to be produced?
   B) How are these goods and services to be produced?
   C) How much do we pay those who produce the goods and services?
   D) Who will receive these goods and services?

9. ______ refers to the way an economy allocates goods and services to consumers.
   A) Production
   B) Capital
   C) Distribution
   D) Absolute advantage

10. The way an economy allocates output to consumers is called:
    A) distribution.
    B) efficiency.
    C) government allocation.
    D) output maximization.

11. Planned economies rely heavily on ______ to make most economic decisions.
    A) consumers
    B) producers
    C) the government
    D) corporations

12. A market economy is also known as a ______ economy, and decisions are made by ______.
    A) capitalist; the government
    B) capitalist; private individuals
    C) socialist; the government
    D) socialist; private individuals
13. A laissez-faire approach to the question of “how to produce” would be found in a:
   A) socialist economy.
   B) communist economy.
   C) market economy.
   D) planned economy.

14. In a communist state, the _____ decide(s) what a society wants, but in a capitalist economy, the _____ decide what products they want.
   A) government; producers
   B) consumers; producers
   C) government; consumers
   D) producers; consumers

15. Which statement is NOT part of a market economy?
   A) Most economic decisions are made by central governments.
   B) Product prices are the principal mechanism for communicating information in the system.
   C) Consumers are free to decide what goods and services to purchase.
   D) The government plays a primary role in protecting private property rights.

16. In a market economy, product prices do NOT help to determine how:
   A) consumers decide whether to buy or not buy.
   B) firms employ their resources.
   C) firms decide which production technology to use.
   D) governments allocate their resources.

17. In a planned economy, most of the productive resources are owned by:
   A) households.
   B) business firms.
   C) the government.
   D) foreign countries.

18. In a pure market economy, the government's primary roles do NOT include:
   A) protecting property rights.
   B) enforcing contracts between private parties.
   C) providing public goods, such as national defense.
   D) reallocating resources across the economy.
19. Which of the following is part of a planned economy?
   A) Private individuals and firms own most resources.
   B) Product prices are primarily determined by the interaction of demand and supply.
   C) Most of the productive resources are owned by the state.
   D) Consumers are free to decide what goods and services to purchase.

20. In a _____ economy, individuals and firms own most resources, and in a _____
    economy, the government controls most resources.
   A) market; planned
   B) planned; socialist
   C) planned; market
   D) socialist; planned

21. The Scandinavian countries of Europe:
   A) have economies coordinate solely by markets.
   B) allow a large role for government services.
   C) have no barriers to the market.
   D) do not protect property rights.

22. In a capitalist economy, the answer to the question “What should be produced?” is
    determined by:
   A) the government.
   B) consumers' demands for specific goods and services.
   C) producers.
   D) government and producers acting together.

23. The conversion of resources to satisfy wants is described as:
   A) consumption.
   B) distribution.
   C) production.
   D) conservation.

24. Which of these is NOT an economic factor of production?
   A) land
   B) entrepreneurial ability
   C) money
   D) labor
25. Capital, which includes all manufactured products that are used to produce other goods and services, earns:
   A) profit.
   B) wages.
   C) interest.
   D) rent.

26. In economics, the term “land” includes:
   A) mostly agricultural land.
   B) natural resources excluding water resources.
   C) all natural resources.
   D) resources found on the Earth's surface.

27. Economists refer to “rent” as a payment to:
   A) housing.
   B) land.
   C) capital.
   D) labor.

28. The resource known as “labor” includes:
   A) physical labor only.
   B) physical and mental skills and talents.
   C) people willing to do physical and difficult work.
   D) the work of legal workers.

29. The concept of human capital is important to economists because:
   A) improvements to human capital lead to higher standards of living.
   B) it compares people with machinery.
   C) it helps managers plan for future growth.
   D) it shows ways for firms to reduce costs.

30. Human capital is:
   A) the improvement of labor capabilities from training, education, and apprenticeship programs.
   B) the equipment that companies use in the production process.
   C) included in the land resource.
   D) included in entrepreneurial ability.
31. Land as a productive resource does NOT include:
   A) mineral deposits.
   B) oil.
   C) water.
   D) computers.

32. The payment to land is called:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

33. Economists refer to the payment to capital as:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

34. Economists refer to the payment to land as:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

35. The payment to entrepreneurship is called:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

36. Entrepreneurs receive profits for their efforts primarily because they:
   A) combine land, labor, and capital to produce goods and services.
   B) combine land, labor, and capital to produce goods and services and assume the risks associated with business.
   C) assume the risks associated with business.
   D) have the best ideas.
37. In economics, capital refers to:  
   A) funds used by businesses to acquire goods and services.  
   B) the process of raising money in the stock market.  
   C) actual manufactured buildings and equipment used in the production process.  
   D) anything that adds to human capital.

38. If a pizza parlor uses an oven in its production process, the oven is an example of which factor of production?  
   A) capital  
   B) entrepreneurial ability  
   C) labor  
   D) land

39. Which is an example of capital in the production process of an amusement park?  
   A) the electricity used at the park  
   B) the mechanics who maintain the equipment  
   C) the roller coaster  
   D) the ticket-taker

40. Natural resources in the production process are called _____, and their payment is called _____.  
   A) capital; rent  
   B) labor; interest  
   C) land; rent  
   D) land; wages

41. What is considered a labor resource?  
   A) a sewing machine  
   B) a trainee  
   C) mineral deposits  
   D) a copier

42. Which is considered a land resource?  
   A) a sewing machine  
   B) an apprentice  
   C) mineral deposits  
   D) a copier
43. Natural resources such as copper deposits are:
   A) capital.
   B) land.
   C) labor.
   D) investment capital.

44. Which of the following is NOT an example of an improvement to human capital?
   A) students taking a course in economics
   B) increasing the number of machines available to workers
   C) an intensive internship program
   D) an employee learning to use Microsoft Access

45. Land:
   A) is not a scarce resource.
   B) earns rent.
   C) earns interest.
   D) is only agricultural.

46. Capital:
   A) refers to commercial bank-lending policies.
   B) is any manufactured product that is used to produce other products.
   C) is a field of corn.
   D) is the only element that is needed to turn resources into products.

47. Capital includes all of these EXCEPT:
   A) dollar bills in a bank vault.
   B) copy machines in an insurance company.
   C) tractor loaders of a construction firm.
   D) drilling equipment at a tool-and-die company.

48. Which pair does NOT relate?
   A) capital—interest
   B) land—revenue
   C) labor—wages
   D) entrepreneurial ability—profit
49. All of these are considered human capital, EXCEPT:
   A) working in a factory.
   B) obtaining a college education.
   C) receiving training for another area in a current job.
   D) completing a professional development course.

50. Economists refer to the payment to labor as:
   A) rent.
   B) wages.
   C) interest.
   D) profit.

51. In economics, the term "capital" refers to:
   A) money available to firms.
   B) markets where companies go to raise funds.
   C) the primary city in each governmental jurisdiction where most economic activity occurs.
   D) manufactured buildings and equipment used to produce other goods and services.

52. In economics, the payment to capital is called:
   A) wages.
   B) interest.
   C) capitalization.
   D) profit.

53. Which statement about entrepreneurs is NOT correct?
   A) Entrepreneurs combine other resources to produce goods and services.
   B) Entrepreneurs manage the day-to-day marketing, finance, and production decisions.
   C) The payment that entrepreneurs earn is called profit.
   D) Entrepreneurs do not take on any business risks.

54. Entrepreneurs:
   A) take no risks, if they are smart.
   B) earn wages for their work.
   C) combine and manage inputs of land, labor, and capital.
   D) earn rents for their work.
55. _____ combine land, labor, and capital to produce goods and services and assume the risks associated with running businesses.
   A) Economists
   B) Capital marketers
   C) Entrepreneurs
   D) Financiers

56. When an economy is producing the mix of goods and services MOST desired by society, that economy is considered to have:
   A) productive efficiency.
   B) productive equitability.
   C) allocative efficiency.
   D) allocative equitability.

57. When the mix of goods and services produced is just what society desires, then __________ exists.
   A) socialism.
   B) communism.
   C) production efficiency.
   D) allocative efficiency.

58. _____ occurs when goods and services are produced with as few resources as possible, while _____ occurs when the mix of goods and services produced is the most desired by society.
   A) Allocative efficiency; production efficiency
   B) Production efficiency; social efficiency
   C) Allocative efficiency; social efficiency
   D) Production efficiency; allocative efficiency

59. Which statement is TRUE regarding production efficiency?
   A) Efficiency and cost are unrelated concepts.
   B) Production efficiency is independent of the type of technology used.
   C) Producing at the lowest possible resource cost is equivalent to getting as much output as possible from a given set of resources.
   D) The most economically efficient production technology is not always the cheapest.
60. "Production efficiency" is described as:
   A) goods and services that are produced using the fewest resources possible.
   B) the mix of goods and services produced being just what society desires.
   C) one country having a lower opportunity cost of producing a good than another country.
   D) one country being able to produce more of a good than another country.

61. When a society is producing the mix of goods that the society wants to consume, then it is said to have:
   A) solved the economic problem.
   B) an equitable distribution of goods and services.
   C) an efficient form of government.
   D) obtained allocative efficiency.

62. _____ occurs when the mix of goods society decides to produce is produced at the lowest possible resource or opportunity cost.
   A) Allocative efficiency
   B) Production efficiency
   C) Opportunity cost
   D) Cost allocation

63. The production of too many Matchbox cars and not enough Barbie Dolls is an example of:
   A) production inefficiency.
   B) allocative inefficiency.
   C) technical inefficiency
   D) labor inefficiency.

64. When society produces the mix of goods and services that are most desired and produces them at the lowest cost possible:
   A) production efficiency is achieved.
   B) allocative efficiency is achieved.
   C) production and allocative efficiency are achieved.
   D) inefficiency occurs.

65. Which of these items restricts our choices so that we must make tradeoffs?
   A) time and money
   B) money and personal preferences
   C) time and personal preferences
   D) time, money, and personal preferences
66. The graph we could draw to represent the combinations of two goods that are possible within a given society at full employment is a(n):
A) efficiency curve.
B) allocation curve.
C) production possibilities frontier.
D) cost graph.

67. The _____ shows the combination of two goods that are possible for a society to produce at full employment.
A) full employment line
B) production possibilities frontier
C) goods and services frontier
D) maximal productivity curve

68. The derivation of a production possibilities frontier assumes that:
A) some resources are not being used.
B) there is a fixed quantity of resources and technology available.
C) some resources are not being produced efficiently.
D) technology is free.

69. The production possibilities model holds _____ and _____ constant.
A) growth; human capital
B) land; labor
C) labor; capital
D) resources; technology

70. When an economy is operating efficiently, the production of one more unit of a good will result in some loss of production of another good because:
A) technology can only improve the production of one good.
B) the production possibilities frontier (PPF) shifts inward as more of only one good is produced.
C) resources are limited and efficiency implies that all resources are already in use.
D) consumers will not want more of both goods.
71. A point on a nation's production possibilities frontier indicates:
   A) an undesirable combination of goods and services.
   B) combinations of output that are unattainable, given the current stock of resources and technology.
   C) levels of production that will cause both unemployment and inflation.
   D) that resources are fully utilized in producing the given combination of goods and services.

72. A point to the right of the production possibilities frontier is:
   A) inefficient.
   B) unattainable.
   C) improbable.
   D) efficient.

73. Production levels to the right of the production possibilities frontier are:
   A) attainable.
   B) efficient.
   C) inefficient.
   D) unattainable.

74. Production levels to the left of the production possibilities frontier are:
   A) attainable but efficient.
   B) attainable but inefficient.
   C) unattainable and efficient.
   D) unattainable and inefficient.

75. If an economy is operating at a point that is inside of its production possibilities frontier, then it can be assumed that its resources are:
   A) efficiently allocated.
   B) over-utilized.
   C) fully utilized.
   D) underutilized.

76. A country operating outside of the production possibilities frontier is:
   A) operating efficiently.
   B) operating inefficiently and at an unattainable level.
   C) operating inefficiently but in an area that can be attained with proper use of resources.
   D) operating impossibly because a country cannot operate outside the production possibilities frontier.
77. A change from a technically or productively inefficient mix to an efficient mix of output would BEST be represented with a production possibilities frontier (PPF) as a:
   A) shift outward of the PPF.
   B) shift inward of the PPF.
   C) movement from inside the PPF onto the PPF.
   D) movement from a point on the PPF to a point inside the PPF.

78. If an economy is producing at a point inside its production possibilities frontier:
   A) it is possible to produce more of one good without giving up some of the other good.
   B) it is producing efficiently.
   C) it is producing beyond its production possibilities.
   D) full employment is achieved.

79. Points that are unattainable for an economy are shown as points:
   A) inside the production possibilities frontier.
   B) on the production possibilities frontier.
   C) outside the production possibilities frontier.
   D) of unemployment.

80. Zetaland produces widgets and gadgets. At current levels of output, it can produce more of both. We can conclude that:
   A) Zetaland is at full employment.
   B) opportunity cost is maximized.
   C) some resources are not being used.
   D) the economy is on the production possibilities frontier.
81. (Figure: Production Possibilities) Which statement is NOT correct regarding point X?

A) The combination produced at point X is productively efficient.
B) Society might prefer other combinations on the line to the mix of output at point X.
C) Because it is on the line, combination at point X has no opportunity cost.
D) The combination of output at point X might not be allocatively efficient.

82. Every point on a production possibilities frontier (PPF) represents:
A) production efficiency
B) allocative efficiency.
C) production and allocative efficiency.
D) X-efficiency.
83. (Figure: Tanks and Health Care) Which point in the figure is obtainable but NOT efficient?

A) point a  
B) point b  
C) point f  
D) point g

84. (Figure: Determining Production Possibilities) The graph shows the production possibilities frontier for goods A and B while X marks a combination that:

A) has no opportunity costs.  
B) cannot be obtained even with improvements in technology.  
C) is unobtainable with current resources.  
D) is obtainable if workers work harder.
85. Each point along a production possibilities frontier represents:
   A) maximum output, given the state of technology and resource availability.
   B) an economically inefficient combination of goods being produced.
   C) a combination of goods that meets the equity criteria.
   D) a combination of goods produced that can never be produced.

86. In the context of the production possibilities frontier, opportunity cost can be measured by the:
   A) ratio of the amounts of the two goods being produced.
   B) slope of the frontier.
   C) ratio of the costs of the two goods being produced.
   D) amount of labor needed to produce the goods and services.

87. A production possibilities frontier with constant opportunity costs is:
   A) convex.
   B) concave.
   C) a straight line.
   D) horizontal.

88. A production possibilities frontier with increasing opportunity costs is:
   A) convex.
   B) bowed.
   C) a straight line.
   D) horizontal.

89. A country operating inside of its production possibilities frontier (PPF) is operating:
   A) efficiently.
   B) inefficiently and at an unattainable level.
   C) inefficiently but in an area that can be attained.
   D) in the unattainable region.

90. Full employment on a production possibilities frontier (PPF) is shown by:
   A) points inside the PPF.
   B) points on the PPF.
   C) points outside the PPF.
   D) an inefficient use of resources.
91. The production possibilities frontier shows:
   A) that unattainable combinations of goods occur inside the curve.
   B) decreasing opportunity costs along the curve.
   C) only two possible combinations of goods an economy can produce at full employment.
   D) all possible combinations of two goods an economy can produce, given its available factors of production and technology.

92. A production possibilities frontier that is a straight line is the result of:
   A) constant opportunity costs.
   B) increasing opportunity costs.
   C) scarcity.
   D) underemployment of resources.

93. A lawyer can argue a case in court for one hour and make $300. She could alternatively use that hour of time to type a legal brief in her office. What is the opportunity cost of her typing the legal brief?
   A) nothing, since she would never type a legal brief
   B) nothing, since she would always hire an administrative assistant to type for her
   C) $300, since that is the amount she could have made by arguing a case in court
   D) There is not enough information in this problem to be able to answer the question.

94. Abdul decided to sleep in rather than attend his 8:30 A.M. economics class. Economists would find this choice:
   A) rational, if Abdul has not missed any other classes.
   B) irrational, because economic analysis suggests you should always attend the classes for which you have paid.
   C) irrational, because oversleeping is not in Abdul's self-interest.
   D) rational, if Abdul values sleep more highly than the benefit he would expect to receive from attending the class.

95. Which statement is NOT an illustration of opportunity cost?
   A) If a person takes a job as long-distance truck driver, he won't have as much time to spend with his family.
   B) If a person studies for her English class, she won't have as much time to write creative poetry.
   C) The more a person works at her job, the more leisure time she has.
   D) If I party every night of the week, my grades at school will drop.
96. If someone accepts a job in Seattle as a financial analyst, he must give up the chance to accept a similar job in Australia. Giving up the job in Australia is his:
   A) allocative cost.
   B) opportunity cost.
   C) production cost.
   D) cost factor.

97. If the government of Spain decides to spend less on the military and more on health care, the forgone spending on military items represents the:
   A) cost factor of the extra health care.
   B) production efficiency of the extra health care.
   C) opportunity cost of the extra health care.
   D) allocative cost of the extra health care.

98. If the total expenses of being a full-time college student for one year adds up $17,000, and that student could have earned $20,000 working full time during the same year, then the student's opportunity cost for the year of college would be:
   A) $3,000.
   B) $37,000.
   C) $20,000.
   D) $17,000.
99. (Figure: Bran Muffins and Corn Flakes PPF) The graph shows the production possibilities frontier for a bakery that makes corn flakes and bran muffins. Which statement is NOT correct?

A) The opportunity cost of increasing production of corn flakes from 200 to 300 pounds is 50 pounds of bran muffins.
B) Due to limited resources, there is a tradeoff between producing corn flakes and bran muffins.
C) The graph implies that resources well-suited for making corn flakes are not as well-suited for producing bran muffins.
D) The company faces decreasing opportunity costs.
100. (Figure: Pork and Corn PPF) When we move from point \( b \) to point \( c \), the opportunity cost of producing more corn is \( \_\_\_\_ \) the opportunity cost of moving from point \( d \) to point \( e \).

\[ \begin{array}{c}
\text{PPF} \\
\text{Pork} \\
5 \\
4 \\
3 \\
2 \\
1 \\
0 \\
\text{Corn} \\
0 \\
5 \\
10 \\
15 \\
20 \\
25 \\
30 \\
\end{array} \]

A) greater than  
B) exactly the same as  
C) less than  
D) indeterminately related to

101. When you move from one point to another on the production possibilities frontier (PPF) and the opportunity cost of producing one good in terms of the other good does not change, then the PPF:

A) must be bowed out.  
B) must be bowed in.  
C) must be a straight line.  
D) has an indeterminate shape.

102. (Table) The table shows the production possibilities schedule for guns and butter. As the production of butter increases, the opportunity cost of butter:

<table>
<thead>
<tr>
<th>Guns (hundreds)</th>
<th>6</th>
<th>5</th>
<th>4</th>
<th>3</th>
<th>2</th>
<th>1</th>
<th>0</th>
</tr>
</thead>
<tbody>
<tr>
<td>Butter (tons)</td>
<td>0</td>
<td>5</td>
<td>10</td>
<td>15</td>
<td>20</td>
<td>25</td>
<td>30</td>
</tr>
</tbody>
</table>

A) first rises, then falls.  
B) first falls, then rises.  
C) falls continuously.  
D) remains constant.
103. (Table) The table shows the production possibilities schedule for guns and butter. The opportunity cost of increasing gun production from 100 units to 200 units is:

<table>
<thead>
<tr>
<th>Guns (hundreds)</th>
<th>6</th>
<th>5</th>
<th>4</th>
<th>3</th>
<th>2</th>
<th>1</th>
<th>0</th>
</tr>
</thead>
<tbody>
<tr>
<td>Butter (tons)</td>
<td>0</td>
<td>5</td>
<td>10</td>
<td>15</td>
<td>20</td>
<td>25</td>
<td>30</td>
</tr>
</tbody>
</table>

A) 0 tons of butter.
B) 5 tons of butter.
C) 10 tons of butter.
D) 15 tons of butter.

104. (Table) The table shows coffee and tea units produced for the United States and Japan. If Japan decides to increase production of tea from 20 units to 35 units, the opportunity cost is:

<table>
<thead>
<tr>
<th>United States</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coffee</td>
</tr>
<tr>
<td>Tea</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Japan</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coffee</td>
</tr>
<tr>
<td>Tea</td>
</tr>
</tbody>
</table>

A) 15 units of tea.
B) 10 units of tea.
C) 8 units of coffee.
D) 10 units of coffee.

105. (Table) The table shows coffee and tea units produced for the United States and Japan. The opportunity costs are:

<table>
<thead>
<tr>
<th>United States</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coffee</td>
</tr>
<tr>
<td>Tea</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Japan</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coffee</td>
</tr>
<tr>
<td>Tea</td>
</tr>
</tbody>
</table>

A) increasing for the United States and Japan.
B) constant for the United States and Japan
C) increasing for the United States and constant for Japan
D) constant for the United States and increasing for Japan.
106. In an eight-hour day, Isabel can produce 15 pounds of taffy or 3 pounds of chocolate chip cookies. In an eight-hour day, Ramona can produce 6 pounds of taffy or 6 pounds of chocolate chip cookies. The opportunity cost of producing 1 pound of chocolate chip cookies is:
   A) one-fifth of an hour for Isabel and one hour for Ramona.
   B) one hour for Isabel and one hour for Ramona.
   C) five pounds of taffy for Isabel and one pound of taffy for Ramona.
   D) one-fifth of a pound of taffy for Isabel and one pound of taffy for Ramona.

107. (Table) Given the production possibilities schedule shown in the table, what is the opportunity cost of moving from E to F?

<table>
<thead>
<tr>
<th>Bananas</th>
<th>Apples</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td>12</td>
</tr>
<tr>
<td>F</td>
<td>9</td>
</tr>
<tr>
<td>G</td>
<td>5</td>
</tr>
<tr>
<td>H</td>
<td>0</td>
</tr>
</tbody>
</table>

A) 2 bananas
B) 3 bananas
C) 2 apples
D) 4 apples

108. (Figure: Bread and Honey) As more honey is produced, the opportunity cost of producing honey:

   A) decreases.
   B) increases.
   C) remains constant.
   D) is constant for the first 50 jars and then decreases as productive efficiency is achieved.
109. (Figure: Bread and Honey) In the graph, point \( b \) represents:

A) a point of inefficiency.
B) a point where all of society's resources are fully employed.
C) a better economic situation than point \( a \).
D) economic growth.

110. (Figure: Bread and Honey) In the graph, a move from point \( a \) to point \( b \) costs:

A) 70 jars of honey.
B) 75 loaves of bread.
C) 90 loaves of bread.
D) 15 loaves of bread.
111. (Figure: Bread and Honey) Which point in the graph represents unemployed resources?

A) point a  
B) point b  
C) point f  
D) point g

112. (Figure: Bread and Honey) In the graph, a move from point f to point g:

A) is a move from full employment to less than full employment.  
B) is impossible with the resources that are available.  
C) is a move from an inefficient point to one that fully utilizes all the available resources.  
D) reflects a positive opportunity cost tradeoff.
113. (Figure: Bread and Honey) In the graph, a movement from point $f$ to point $g$ could occur if:

A) technological improvements occur.
B) unemployed workers find jobs.
C) people decide they prefer bread to honey.
D) people decide they prefer honey to bread.

114. A production possibilities frontier will have a curved or “bowed out” shape if:

A) opportunity costs are declining.
B) opportunity costs are increasing.
C) resources are scarce.
D) the economy is growing.

115. Increasing opportunity costs occur along the production possibilities frontier because:

A) of unemployment in the economy.
B) not all resources are equally well suited to produce all goods.
C) resources lack specialization.
D) of inequities in the distribution of income.

116. Suppose that in Japan one worker can produce either four cars or five tons of grain per year. What is the opportunity cost of producing one car in Japan?

A) 0.4 ton of grain
B) 0.8 ton of grain
C) 1.25 tons of grain
D) 2.5 tons of grain
117. Which shaped curve reflects the reality that most goods are better suited for specific sorts of production?
   A) A straight line production possibilities frontier
   B) A concave production possibilities frontier
   C) A downward-sloping production possibilities frontier
   D) A convex possibilities frontier

118. If an economy faces increasing opportunity costs with respect to the production of two goods, then the production possibilities frontier between the two goods will be:
   A) bowed inward.
   B) a straight downward-sloping curve.
   C) bowed outward.
   D) a positively sloped curve.

119. If a producer does NOT face increasing opportunity cost, then the production possibilities frontier is:
   A) bowed inward.
   B) a straight downward-sloping curve.
   C) bowed outward.
   D) a positively sloped curve.

120. Which statement BEST illustrates increasing opportunity costs?
   A) As new technology evolves, it becomes more difficult to obtain the energy to run the technology.
   B) Immigration increases the productivity of the labor force even if it costs existing workers their jobs.
   C) The costs of closing factories exceed the profit opportunities of keeping them operating.
   D) As more rice is produced, rice farmers plant in land that is good for growing other crops but poor for growing rice.

121. (Table) The table shows the number of hours Paul spends either reading books or watching movies. Paul only has 10 hours he can use on the activities. If Paul decides to go from spending 2 hours reading books to 4 hours reading books, what is his opportunity cost for watching movies?

<table>
<thead>
<tr>
<th>Books</th>
<th>Movies</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0  2  4 6 8 10</td>
</tr>
<tr>
<td></td>
<td>10 8 6 4 2 0</td>
</tr>
</tbody>
</table>

   A) 2 hours of movie watching
   B) 4 hours of movie watching
   C) 6 hours of movie watching
   D) 8 hours of movie watching
122. (Table) According to the table, the shape of the production possibilities frontier is:

<table>
<thead>
<tr>
<th>Books</th>
<th>0</th>
<th>2</th>
<th>4</th>
<th>6</th>
<th>8</th>
<th>10</th>
</tr>
</thead>
<tbody>
<tr>
<td>Movies</td>
<td>10</td>
<td>8</td>
<td>6</td>
<td>4</td>
<td>2</td>
<td>0</td>
</tr>
</tbody>
</table>

A) a straight line.
B) bowed.
C) vertical.
D) horizontal.

123. (Table: Production Possibilities Schedule) If the table is graphed, the production possibilities frontier shows:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) constant opportunity costs.
B) increasing opportunity costs.
C) decreasing opportunity costs.
D) a constant slope.

124. (Table: Production Possibilities Schedule) In the table, production of a combination of 3,500 iPads and 1,500 HDTVs:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) is unattainable.
B) wasted resources.
C) is accomplished at full employment.
D) lies outside of the production possibilities frontier.
125. (Table: Production Possibilities Schedule) In the table, a combination of 4,500 iPads and 2,000 HDTVs:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) is unattainable.
B) is a point on the production possibilities frontier.
C) is a point inside of the production possibilities frontier.
D) is accomplished at full employment.

126. (Table: Production Possibilities Schedule) In the table, a combination of 3,500 iPads and 2,000 HDTVs is:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) unattainable.
B) a point inside of the production possibilities frontier.
C) a point outside of the production possibilities frontier.
D) a point on the production possibilities frontier.

127. (Table: Production Possibilities Schedule) In the table, if society wants to increase production of HDTVs from 1,000 units to 2,000 units, the opportunity cost of doing so will be:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) 500 iPads
B) 4,500 iPads.
C) 3,500 iPads.
D) 1,000 iPads.
128. (Table: Production Possibilities Schedule) In the table, if society wants to increase production of HDTVs from 2,000 units to 3,000 units, the opportunity cost of doing so will be:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) 500 iPads  
B) 1,500 iPads.  
C) 1,000 iPads.  
D) 2,000 iPads.

129. (Table: Production Possibilities Schedule) In the table, if society wants to increase production of iPads from 4,500 units to 5,000 units, production of HDTVs will:

<table>
<thead>
<tr>
<th>iPads</th>
<th>HDTVs</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>0</td>
</tr>
<tr>
<td>4,500</td>
<td>1,000</td>
</tr>
<tr>
<td>3,500</td>
<td>2,000</td>
</tr>
<tr>
<td>2,000</td>
<td>3,000</td>
</tr>
<tr>
<td>0</td>
<td>4,000</td>
</tr>
</tbody>
</table>

A) fall to 1,000 units.  
B) increase.  
C) fall to 0 units.  
D) stay the same.

130. (Table) Suppose an economy can produce the combinations of bread and cookies shown in the table. The opportunity cost of increasing bread production from 25 loaves to 50 loaves is _____ and the opportunity cost of increasing bread production from 50 loaves to 75 loaves is _____.

<table>
<thead>
<tr>
<th>Bread (loaves)</th>
<th>Cookies (dozens)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>100</td>
</tr>
<tr>
<td>25</td>
<td>90</td>
</tr>
<tr>
<td>50</td>
<td>75</td>
</tr>
<tr>
<td>75</td>
<td>45</td>
</tr>
<tr>
<td>100</td>
<td>0</td>
</tr>
</tbody>
</table>

A) 25 loaves of bread; 30 dozen cookies  
B) 15 dozen cookies; 30 dozen cookies  
C) 90 dozen cookies; 45 dozen cookies  
D) 75 loaves of bread; 50 loaves of bread
131. When resources are being used inefficiently, the:
A) economy is operating at a point outside its production possibility frontier.
B) production possibility frontier shifts outward.
C) economy is operating at a point inside its production possibility frontier.
D) economy is operating at a point on the production possibility frontier.

132. Points inside (below and to the left of) the production possibility frontier are:
A) attainable and efficient.
B) unattainable and efficient.
C) attainable and inefficient.
D) unattainable and inefficient.

133. When a country is operating at its full potential output, it is producing at a point:
A) above and to the right of the production possibility frontier.
B) on the production possibility frontier.
C) below and to the left of the production possibility frontier.
D) There is not enough information to answer this question.

134. (Figure: Pork and Corn PPF) Using the graph, if we are operating at the economy's potential output, then production can be at points:

A) b or h.
B) c or f.
C) h or g.
D) g or d.
135. (Figure: Pork and Corn PPF 2) If we want to produce 10 units of corn, then we can produce no more than _____ unit(s) of pork.

A) 1
B) 2
C) 3
D) 4
136. (Figure: Pork and Corn PPF 2) The opportunity cost of producing a unit of pork is _____ unit(s) of corn.

A) 1  
B) 5  
C) 8  
D) 10

137. A country's GDP is inside the frontier of the production possibilities frontier. This could happen because of:
A) technological change.  
B) a recession.  
C) economic growth.  
D) a lack of land resources.

138. An increase in the quantity and/or quality of labor available could be due to each of the following, EXCEPT:
A) an increase in the working age population.  
B) more women entering the workforce.  
C) strict immigration policy enforcement.  
D) an increase in the college graduation rate.

139. Which is NOT a source of economic growth?
A) increasing business investment  
B) increasing research and development  
C) reducing the level of international trade  
D) reducing the predictability of inflation
140. Which are the principal resources that can be changed through actions taken by the government?
   A) capital and entrepreneurial ability
   B) capital and labor
   C) labor and entrepreneurial ability
   D) labor and land

141. If a society's production possibilities frontier shifts to the right:
   A) the society's standard of living may increase.
   B) the society must choose a different mix of goods.
   C) there must be an increase in the production of one industry and a decrease in production in other industries.
   D) there must have been an increase in the society's resources.

142. (Figure: Interpreting PPF Shifts) According to the graph, which of the following changes may cause the production possibilities frontier to shift inward from $PPF_1$ to $PPF_0$?

   A) increase in the labor force
   B) improve the skills of the workers
   C) increase government regulation on businesses overall
   D) increase in the population
143. (Figure: Interpreting PPF Shifts 2) The graph describes a situation in which:

A) both industries have experienced technological improvements.
B) only Industry 1 has had a technological improvement.
C) neither industry has had a technological improvement.
D) only Industry 2 has had a technological improvement.
144. (Figure: Interpreting PPF Shifts 3) Which statement would NOT be a possible explanation for the shift depicted in the graph?

A) Workers receive more education.
B) New technology is developed.
C) Unemployment rises.
D) New energy resources are found.

145. Which of these can lead to a decrease (leftward shift) in the production possibilities frontier?
A) banning a technology due to its adverse environmental effects
B) a policy encouraging more immigration
C) tax breaks on the adoption of more efficient technologies
D) a policy that encourages entrepreneurship

146. A country can use its given resources to produce capital goods or consumer goods. This implies that:
A) an economy can "have it all."
B) there is a conflict between capitalists and consumers.
C) more consumption in the present leads to higher economic growth for future generations.
D) there is a tradeoff between the current and the future standard of living.
147. Suppose that the government could stimulate spending in one of the following expenditure categories. In which category would the spending increase contribute most to an expansion of the country's production possibilities frontier?
   A) consumption goods
   B) government purchases
   C) net exports
   D) capital goods

148. Which of these would be MOST likely to cause the production possibilities frontier to shift to the left?
   A) an increase in population
   B) an advancement in technology
   C) a decrease in the size of the labor force
   D) a decrease in taxes

149. (Figure: Determining Production Possibilities 2) Which point in the graph is consistent with a recession?

   A) point a
   B) point b
   C) point c
   D) point d

150. Which of these is MOST likely to cause the production possibilities frontier to shift to the right?
   A) an increase in technology
   B) an increase in consumption
   C) an increase in producer prices
   D) an increase in tax revenues
151. Economic growth is shown as a:
   A) shift to the left of the PPF.
   B) shift to the right of the PPF.
   C) an upward movement along the PPF.
   D) a downward movement along the PPF.

152. (Figure: Determining Production Possibilities 3) According to the graph, the output combination represented by the diamond can be achieved only:

   A) by reducing immigration.
   B) if the unemployment rate were zero.
   C) if more resources were acquired.
   D) by reducing imports.

153. The increased participation of women in the workforce:
   A) has led to a shift in the structure of the workforce toward services.
   B) has not contributed to the rate of economic growth, because the women have simply shifted from waged work to unwaged work.
   C) has contributed to the rate of economic growth.
   D) shifts the production possibilities frontier curve to the left.

154. Economic growth is shown as a:
   A) leftward shift of the PPF.
   B) movement inside the PPF.
   C) movement along the PPF.
   D) rightward shift of the PPF.
155. Which of these results in a higher standard of living?
   A) higher tax rates
   B) higher inflation rates
   C) higher levels of education
   D) a decrease in trade

156. The two basic determinants of economic growth are _____ and _____.
   A) expanding resources; improving technologies
   B) tariffs; trading with weaker countries
   C) income taxes; human capital
   D) government spending; labor productivity

157. If a nation selects a product mix focused on _____ goods, the production possibilities frontier will expand at a greater rate than if the nation produced mostly _____ goods.
   A) labor-intensive; capital-intensive
   B) consumption; capital
   C) labor-intensive; consumption
   D) capital; consumption

158. Investment in human capital refers to:
   A) education, on-the-job training, and professional training activities.
   B) increasing the machinery and equipment that firms use.
   C) increasing the number of people working at companies.
   D) increasing the financial capital in the economy.

159. Which action will NOT shift a production possibilities frontier curve outward?
   A) increasing the number of workers
   B) increasing worker productivity
   C) shifting preferences of consumers to cheaper products
   D) technological change

160. An increase in technology:
   A) shifts the production possibilities frontier curve outward.
   B) shifts the production possibilities frontier curve inward.
   C) creates unemployment.
   D) decreases inflation.
161. Which of the following does NOT represent an increase in the level of human resources available to an economy?
   A) a decrease in the unemployment rate
   B) immigration
   C) more people entering the labor force
   D) a higher birth rate

162. Which of the following shifts the production possibilities frontier outward?
   A) a decreasing population
   B) capital accumulation
   C) increasing prices
   D) increasing consumption

163. The introduction of the tablet computer to the U.S. economy would BEST be represented with a production possibilities frontier (PPF) as a:
   A) outward shift of the PPF.
   B) inward shift of the PPF.
   C) a movement from inside the PPF onto the PPF.
   D) a movement from a point on the PPF to a point inside the PPF.

164. Increased illegal immigration into the United States would best be represented with a production possibilities frontier (PPF) as a:
   A) outward shift of the PPF.
   B) inward shift of the PPF.
   C) a movement from inside the PPF onto the PPF.
   D) a movement from a point on the PPF to a point inside the PPF.
165. (Figure: Interpreting PFF Shifts 4) The graph depicts the effects of an improvement in technology. One can conclude from the graph that the technology:

A) provided minimal benefit to this society.
B) affected the production of $x$ more than the production of $y$.
C) reduced unemployment.
D) affected the production of $y$ more than the production of $x$.

![Graph showing PFF Shifts]

166. Technological improvements in the U.S. economy have:
A) reduced the costs of production for U.S. companies.
B) increased production levels in the United States.
C) shifted the U.S. production possibilities frontier to the right.
D) resulted in all of these.

167. Which of these is NOT a factor of economic growth?
A) a decrease in the savings rate
B) an increase in the size of the labor force
C) an investment in human capital
D) an increase in the capital stock

168. A study by the Organization for Economic Co-operation and Development (OECD) on factors driving economic growth finds per capita GDP is:
A) unaffected by increases in average education levels.
B) positively affected by increased tax burdens.
C) negatively affected by higher levels of research and development.
D) positively affected by lower inflation rates.
169. Drivers of economic growth include:
   A) specialization but not international trade.
   B) consumption but not specialization.
   C) international trade but not consumption.
   D) specialization, consumption and international trade.

170. In order for a country to experience economic growth, the country must:
   A) reduce output.
   B) increase inputs.
   C) be productively efficient.
   D) be more allocatively efficient.

171. According to the OECD, which of these will lead to an increase in the per capita GDP?
   A) increases in trade barriers
   B) higher taxes
   C) higher prices
   D) increases in business investment

172. Which of these encourages economic growth?
   A) taxes on imports
   B) inflation
   C) education
   D) taxes on income

173. According to the Organisation for Economic Co-operation and Development (OECD), economic growth is driven by:
   A) an increase in trade.
   B) higher levels of inflation.
   C) a decrease in spending on graduate schools.
   D) a decrease in business investment.

174. According to a recent study by the Organization for Economic Co-operation and Development (OECD), which of these results in a higher standard of living (per capita GDP)?
   A) higher inflation rate
   B) greater tax burden
   C) lower inflation rate
   D) smaller level of international trade
175. According to the Organization for Economic Co-operation and Development (OECD), an increase in which of these would lead to a lower rate of per capita growth?
   A) business investment
   B) research and development
   C) greater tax burden
   D) trade

176. The government can make owning a business easier or more profitable by doing all of these EXCEPT:
   A) reducing regulations.
   B) offering low-interest loans.
   C) offering favorable tax treatment.
   D) asking individual investors to take additional risks.

177. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, which changes in production would leave the citizens of Econia with a lower level of welfare or satisfaction?
   A) A movement from C to B.
   B) A movement from D to E.
   C) A movement from F to G.
   D) A movement from B to G.
178. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, assume that the country is producing at point $D$. All of the 300 bales of wheat are eaten but some people remain hungry. Over 100 of the 520 bales of cotton remain unused. Which statement is correct regarding efficiency in Econia?

A) Econia is producing wheat and cotton in amounts that are as efficient as possible.
B) Econia would have greater production efficiency if it moves from $D$ to $B$.
C) Econia is neither productively nor technically efficient.
D) Econia would have greater allocative efficiency if it moves from $D$ to $B$.

179. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, what is the opportunity cost of moving production from point $B$ (350 tons of wheat and 400 bales of cotton) to point $G$ (190 tons of wheat and 700 bales of cotton)?

A) .53 ton of wheat per bale of cotton.
B) 1.875 tons of wheat per bale of cotton.
C) 300 tons of wheat per 160 bales of cotton.
D) 700 bales of cotton per 400 tons of wheat.
180. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, which attainable point would be productively efficient but might be allocatively inefficient?

A) production at point A  
B) production at point E  
C) production at point C  
D) production at point D

181. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, which point would have the greatest level of production inefficiency?

A) production at point A  
B) production at point E  
C) production at point C  
D) production at point F
182. (Figure: PPF of Econia (a small nation)) Looking at the production possibilities frontier (PPF) of Econia, imagine that research develops a new hybrid variety of cotton that increases Econia's ability to produce cotton. Which statement would be true?

A) Point A is now attainable because there would be an outward, parallel shift of the PPF.
B) Point G remains on Econia's PPF.
C) Points C, D, and F move from being unattainable to attainable.
D) Point A remains unattainable because the ability to produce wheat is unaffected.

183. The government sets regulations to improve safety for factory workers. This relates to which basic economic question?
A) How much should the government pay?
B) What mix of goods and services should be produced?
C) How should goods and services be produced?
D) Who will receive the goods and services?

184. The government increases taxes on high-income workers to provide welfare to the handicapped who are unable to work. This relates to which basic economic question?
A) What prices should the government pay?
B) What mix of goods and services should be produced?
C) How should goods and services be produced?
D) Who will receive the goods and services?

185. The government bans a toy because it has been associated with injuries to children. This relates to which basic economic question?
A) How much should the government decide?
B) What mix of goods and services should be produced?
C) How should goods and services be produced?
D) Who will receive the goods and services?
186. Society has more influence over the amount and characteristics of _____ than it has over any other resource.
   A) land
   B) labor
   C) capital
   D) entrepreneurial ability

187. Why does society have more influence over the amount and characteristics of capital than it has over any other resource?
   A) There is more capital than any other resource so all or part of it can be used.
   B) Capital is money; more money (currency) can be printed in any denomination.
   C) Capital is the only resource that is manufactured.
   D) Capital never wears out or loses its productivity.

188. The concepts of absolute and comparative advantage were developed by:
   A) Friedrich von Hayek.
   B) David Ricardo.
   C) Gunnar Myrdal.
   D) Paul Samuelson.

189. Which economist is known for first describing "comparative advantage"?
   A) Thomas Malthus
   B) John Stuart Mill
   C) David Ricardo
   D) Adam Smith

190. The theory that suggested that countries would mutually benefit from trade by specializing in export goods they could produce at lower opportunity costs than another country is called:
   A) marginal utility.
   B) labor specialization theory.
   C) absolute advantage.
   D) comparative advantage.

191. Who developed the theory of comparative advantage?
   A) John Stuart Mill
   B) Adam Smith
   C) David Ricardo
   D) Karl Marx
192. David Ricardo would be MOST likely to agree with which statement?
   A) High tariffs on grain are needed to protect the living standards of farmers.
   B) Free trade benefits both trading countries.
   C) If you have an absolute advantage in producing both trousers and beer, you should
      not trade with other countries.
   D) If you have a comparative advantage in producing both trousers and beer, you
      should not trade with other countries.

193. David Ricardo:
   A) suggested that increasing wages for workers would increase their consumption and
      lead to economic growth.
   B) wanted to protect textile markets in England.
   C) suggested that countries would benefit from trade.
   D) suggested that goods were exchanged based on the value of those in use.

194. Free trade is known as a _____ game because ____.
   A) positive-sum; one trader's gain is another's loss
   B) positive-sum; both parties to a transaction can achieve positive gains
   C) zero-sum; one trader's gain is another's loss
   D) zero-sum; both parties to a transaction can achieve positive gains

195. Voluntary trade between nations:
   A) has an outcome with even trade-offs between players.
   B) is a positive-sum game.
   C) is a zero-sum game.
   D) is a negative-sum game.

196. "The economic wealth of this country was built primarily by some individuals profiting
     from a transaction, whereas others were harmed by that transaction." This statement
     indicates that its author:
   A) fails to understand the fallacy of composition.
   B) fails to understand that all voluntary trades benefit both parties involved.
   C) fails to understand the significance of the production possibilities frontier.
   D) uses sound economic thinking—the statement is essentially correct.
197. _____ advantage exists when one country can produce more of a good than another country.
   A) Comparative
   B) Absolute
   C) Unfair
   D) Home country

198. If one country has a(n) _____ advantage in the production of one item, it can always produce more of the same item than another nation, given the same resources.
   A) comparative
   B) absolute
   C) special
   D) trade

199. Which statement defines absolute advantage?
   A) Goods and services that are produced at their lowest resource (opportunity) cost.
   B) The mix of goods and services produced is just what the society desires.
   C) One country that has a lower opportunity cost of producing a good than another country.
   D) One country that can produce more of a good than another country if both work with identical resources.

200. Most trade is based on specialization, according to:
   A) brand recognition advantage.
   B) location advantage.
   C) comparative advantage.
   D) absolute advantage.

201. The theory of comparative advantage says that countries:
   A) should restrict trade by cutting off all imports.
   B) should import those goods they can produce at a lower opportunity cost than another country.
   C) can never benefit from specialization in trade.
   D) should export those goods they can produce at a lower opportunity cost than another country.
202. The key to computing comparative advantage is:
   A) calculating the value of the absolute advantage.
   B) a measurement of the opportunity cost.
   C) calculating the cost of production.
   D) computing consumer choice.

203. If a producer has a comparative advantage, then she has selected the activity that:
   A) has the lowest resource cost.
   B) is outside of the production possibilities frontier.
   C) has the lowest opportunity cost.
   D) does not require specialization.

204. Jason produces more jeans than Jasmine. Why would Jason and Jasmine want Jasmine
to produce the jeans even when they both know that he can produce more than she can
at a faster rate?
   A) Jasmine has a lower opportunity cost of producing the jeans than Jason.
   B) Jason has a lower opportunity cost of producing the jeans than Jasmine.
   C) Jason has an absolute advantage in producing the jeans.
   D) Jasmine has an absolute advantage of producing the jeans.

205. Paolo can walk three dogs or mow two lawns in two hours. Ashanti can walk six dogs or
mow three lawns in two hours. One can conclude that:
   A) Ashanti has absolute advantage in lawn-mowing; and Paolo has comparative
      advantage in dog-walking.
   B) Ashanti has absolute advantage in dog-walking; and Paolo has comparative
      advantage in lawn-mowing.
   C) Paolo has absolute advantage in lawn-mowing; and Ashanti has comparative
      advantage in dog-walking.
   D) Paolo has absolute advantage in dog-walking; and Ashanti has comparative
      advantage in lawn-mowing.

206. Paolo can walk three dogs or mow two lawns in two hours. Ashanti can walk six dogs or
mow three lawns in two hours. Ashanti’s opportunity cost for each additional dog
walked is:
   A) 0.5 lawn mowed.
   B) 1.5 lawns mowed.
   C) 2.0 lawns mowed.
   D) 2.5 lawns mowed.
207. Paolo can walk three dogs or mow two lawns in two hours. Ashanti can walk six dogs or mow three lawns in two hours. According to trade theory, _____ should walk dogs because _____.
A) Ashanti; she produces more than Paolo does in a two-hour period
B) Ashanti; she enjoys a comparative advantage in dog-walking
C) Paolo; he faces a lower opportunity cost for walking dogs
D) Paolo; he enjoys an absolute advantage in dog-walking

208. The law of comparative advantage suggests that:
A) each country should strive to produce roughly equal amounts of all goods.
B) nations can benefit if they trade with each other.
C) free trade among nations is generally harmful to an economy.
D) each country should strive to be self-sufficient.

209. Comparative advantage arises because:
A) all resources are equally effective in the production of goods.
B) the division of labor increases efficiency.
C) the division of labor helps markets function effectively.
D) not all resources are equally effective in the production of goods.

210. Suppose the country of Alphaland can produce more cars than Omegaland can produce, given the same resources. An economist would conclude that Alphaland has a(n) _____ in producing cars.
A) absolute advantage
B) comparative advantage
C) higher opportunity cost
D) higher resource cost

211. Suppose that if the United States produced only oil, it could produce 25 million barrels; and if it produced only microchips it could produce 20 million chips. Suppose that if Mexico produced only oil, it could produce 16 million barrels; and if it produced only microchips, it could produce 8 million chips. Which statement is then correct?
A) Mexico has a comparative advantage in producing both goods.
B) The United States has an absolute advantage over Mexico in producing both goods.
C) Mexico has an absolute advantage over the United States in producing both goods.
D) The United States has a comparative advantage in producing both goods.
212. Which situation would MOST likely lead to an import of copper into a certain country?
   A) a tariff placed on copper
   B) an absolute disadvantage in the production of copper compared to other nations
   C) an absolute advantage in the production of copper by other nations
   D) a comparative advantage in the production of copper by other nations

213. Comparative advantage exists when one country can produce:
   A) more of a good than can another country.
   B) less of a good than can another country.
   C) a good at a higher opportunity cost than another country.
   D) a good at a lower opportunity cost than another country.

214. To gain from trade, a country should:
   A) always try to get a favorable tariff.
   B) specialize in the commodity for which it has a comparative advantage.
   C) always specialize in the commodity for which it has an absolute advantage.
   D) trade only with its political allies.

215. If a country has few resources:
   A) trade will never occur.
   B) trade will not increase the GDP.
   C) it will still have a comparative advantage in a good or service.
   D) specialization would be useless.

216. International trade:
   A) increases consumer prices.
   B) increases consumption possibilities.
   C) reduces production possibilities.
   D) reduces resource consumption.

217. (Table) If Germany decided to produce skirts, what is Germany's opportunity cost?

<table>
<thead>
<tr>
<th>Sweaters</th>
<th>Skirts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Germany</td>
<td>6</td>
</tr>
<tr>
<td>Greece</td>
<td>4</td>
</tr>
</tbody>
</table>

   A) 2 sweaters
   B) 0.5 of a sweater
   C) 1 sweater
   D) 0.25 of a sweater
218. (Table) Germany has a comparative advantage in producing:

<table>
<thead>
<tr>
<th></th>
<th>Sweaters</th>
<th>Skirts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Germany</td>
<td>6</td>
<td>12</td>
</tr>
<tr>
<td>Greece</td>
<td>4</td>
<td>20</td>
</tr>
</tbody>
</table>

A) sweaters and skirts.
B) sweaters only.
C) skirts only.
D) neither good.

219. (Table) Greece has a comparative advantage in:

<table>
<thead>
<tr>
<th></th>
<th>Sweaters</th>
<th>Skirts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Germany</td>
<td>6</td>
<td>12</td>
</tr>
<tr>
<td>Greece</td>
<td>4</td>
<td>20</td>
</tr>
</tbody>
</table>

A) sweaters and skirts.
B) sweaters only.
C) skirts only.
D) neither good.

220. Two countries will benefit from trade if:

A) each country has a higher opportunity cost of producing the traded good.
B) each country has a lower opportunity cost of producing the traded good.
C) each country has an absolute advantage of producing the good.
D) one country does not produce the traded good.

221. The United States can grow a greater total quantity of wheat than Japan. The United States has a(n) _____ in wheat production.

A) higher opportunity cost
B) comparative advantage
C) absolute disadvantage
D) absolute advantage
222. (Figure: Ships and Autos in Countries A and B) Two countries manufacture automobiles and ships. Based on the graphs, which statement is correct?

A) The opportunity cost in Country A of producing 1 ship is 2 cars.
B) The opportunity cost in Country B of producing 1 ship is 10 cars.
C) Country B is more efficient in the production of ships.
D) Both countries are equally efficient in the production of ships because the PPFs are linear.
223. (Figure: Ships and Autos in Countries A and B) Two countries manufacture automobiles and ships. Based on the graphs, which statement is correct?

A) Country A has a comparative disadvantage in producing ships.
B) The two countries should not trade with each other because both can produce both goods.
C) Country B has an absolute advantage in both goods because the line is closer to the origin.
D) Country A has an absolute advantage in producing ships.
224. (Figure: Ships and Autos in Countries A and B) Two countries manufacture automobiles and ships. Based on the graphs:

A) Country A should specialize in automotive manufacturing and Country B should specialize in ship building.

B) There are no advantages to trade because Country A can produce more of both goods.

C) There are no advantages to trade because the lines are downward sloping.

D) Country A should specialize in ship building and Country B should specialize in automotive manufacturing.
225. (Figure: Corn and Oil in the United States and the United Kingdom) Refer to the graphs for the United States and the United Kingdom. If the starting point is point $a$, what is the opportunity cost of the United Kingdom producing one more barrel of oil?

**United States**

<table>
<thead>
<tr>
<th>Corn</th>

A) Mexico has better trade routes north to Canada.
B) Canada sees this tradeoff as a form of charity.
C) Comparative advantage allows both countries to specialize in the items for which they have the lowest opportunity cost and allows for mutual benefits.
D) Canada is hoping to tax the oil heavily as it is imported.
233. (Figure: Turtletopia and Frogland PPFs) _____ has the absolute advantage for producing corn; and _____ has the absolute advantage for producing pork.

A) Turtletopia; Turtletopia
B) Frogland; Frogland
C) Turtletopia; Frogland
D) Frogland; Turtletopia
234. (Figure: Turtletopia and Frogland PPFs) _____ has the comparative advantage for producing corn; and _____ has the comparative advantage for producing pork.

A) Turtletopia; Turtletopia  
B) Frogland; Frogland  
C) Turtletopia; Frogland  
D) Frogland; Turtletopia
235. (Figure: Turtletopia and Frogland PPFs) We see that the two countries _____ benefit from trade, and that Frogland should specialize in producing _____ while Turtletopia should specialize in producing _____.

A) would not; both products for their own use; both products for their own use
B) would; neither good; both goods
C) would; corn; pork
D) would; pork; corn
Given the production possibilities schedules for the United States and Chile, which product should Chile produce if it is to produce the good for which it has a comparative advantage?

</table>

A) Both countries are better off from this trade because they both consume outside their production possibilities frontier (PPF).
B) Both countries are better off from this trade because they both produce outside their PPF.
C) Only the United States is better off from this trade.
D) Only Chile is better off from this trade.

239. Suppose the United States must give up the production of one gallon of paint to produce one pair of shoes. Mexico must give up two gallons of paint to produce one pair of shoes. According to the principle of comparative advantage:

A) there are no benefits to specialization and trade.
B) Mexico should specialize in producing paint, the United States should specialize in producing shoes.
C) Mexico should specialize in producing shoes, the United States should specialize in producing paint.
D) the United States should produce both goods because it has an absolute advantage in both products.
240. (Figure: Wheat and Autos in the United States and South Korea) According to the graph, for every extra:

A) bushel of wheat the United States wants to produce, it must give up 100 cars.
B) car South Korea wants to produce, it must give up 40,000 bushels of wheat.
C) car the United States wants to produce, it must give up 100 bushels of wheat.
D) car South Korea wants to produce, it must give up half a bushel of wheat.

241. (Figure: Wheat and Autos in the United States and South Korea) According to the graph:

A) the United States should import cars and export wheat.
B) the United States should produce both products because it has an absolute advantage in both.
C) the United States should export cars and import wheat.
D) South Korea should produce neither product because it does not possess an absolute advantage in either.
Looking at Greg and Melissa's production possibilities frontiers (PPFs), what production and trade situation would allow both Greg and Melissa to consume a combination of biscuits and cookies outside their PPF?

- Greg produces 200 cookies, Melissa produces 160 biscuits, and Greg trades 100 cookies in exchange for 30 biscuits.
- Greg produces 200 cookies, Melissa produces 160 biscuits, and Greg trades 100 cookies in exchange for 60 biscuits.
- Greg produces 100 biscuits, Melissa produces 80 cookies, and Greg trades 50 biscuits in exchange for 40 cookies.
- Greg produces 100 biscuits, Melissa produces 80 cookies, and Greg trades 50 biscuits in exchange for 70 cookies.
243. (Figure: Biscuits and Cookies PPFs) Greg and Melissa face the production possibilities frontiers shown for biscuits and cookies. When Greg completely specializes in producing the good he has a comparative advantage in, he produces:

A) 100 biscuits and 200 cookies.
B) 0 biscuits and 200 cookies.
C) 50 biscuits and 100 cookies.
D) 100 biscuits and 0 cookies.

244. (Figure: Biscuits and Cookies PPFs) Greg and Melissa face the production possibilities frontiers shown for biscuits and cookies. When Melissa completely specializes in producing the good she has a comparative advantage in, she produces:

A) 160 biscuits and 80 cookies.
B) 0 biscuits and 80 cookies.
C) 80 biscuits and 40 cookies.
D) 160 biscuits and 0 cookies.
245. (Figure: Biscuit and Cookies PPFs) Greg and Melissa face the production possibilities frontiers shown for biscuits and cookies. Assume that Greg and Melissa trade 60 biscuits for 60 cookies after they have completely specialized in producing the good in which they have a comparative advantage. We know that Greg and Melissa are each made better off with specialization and trade than acting alone because:

A) they are both producing outside of their production possibilities frontier.
B) they are both consuming outside of their production possibilities frontier.
C) Greg is producing outside of his production possibilities frontier.
D) Melissa is producing outside of her production possibilities frontier.

246. The key benefit of countries engaging in trade based on comparative advantage is that:
A) both countries will be able to consume more than they would with no trade.
B) it allows countries to produce efficiently inside of their individual production possibilities frontiers.
C) it allows both countries to maximize their opportunity cost.
D) None of these is a key benefit.

247. According to the law of comparative advantage, when one country sells goods for which it has the comparative advantage in production and buys goods for which it does not have the comparative advantage in production:
A) total output will fall.
B) buyers of goods will win and sellers of goods will lose.
C) total output to each person can be expanded.
D) sellers of goods will win and buyers of goods will lose.
248. If a country wants to maximize its GDP, it should always:
   A) export goods in which it has an absolute advantage.
   B) import goods in which it has an absolute advantage.
   C) export goods in which it has a comparative advantage.
   D) import goods in which it has a comparative advantage.

249. Trade can be beneficial to society as a whole because it allows:
   A) for a more efficient use of resources.
   B) for goods to be obtained at a lower opportunity cost.
   C) people to specialize in activities in which they have a comparative advantage.
   D) All of these make trade beneficial to society as a whole.

250. When two countries gain from trade:
   A) one country must have an absolute advantage over the other in producing all goods.
   B) both countries can consume beyond their domestic production possibilities frontiers.
   C) one country must have a comparative advantage over the other in producing all goods.
   D) both countries must be equal in size.

251. Which of these does NOT impose a limit on the amount of international trade?
   A) transportation costs
   B) some industries losing their domestic markets
   C) the danger of overreliance on a small number of products for exports
   D) high level of comparative advantage

252. One of the major limits to trade is:
   A) transaction costs.
   B) comparative advantage.
   C) opportunity costs.
   D) absolute advantage.

253. The practical constraints on trade include all of these EXCEPT:
   A) every international transaction involves costs.
   B) production possibilities frontiers for nations are linear.
   C) production possibilities frontiers exhibit increasing costs and diminishing returns.
   D) some industries and individuals in a country may be hurt by an expansion of trade.
254. The limits on international trade include all of these EXCEPT:
   A) transportation and communication costs.
   B) increasing opportunity costs and diminishing returns.
   C) decreasing opportunity costs and increasing returns.
   D) Trade may hurt some industries and individuals within each country.

255. What is one of the risks involved in complete specialization?
   A) Economic growth fosters poor moral standards.
   B) Specialization in agricultural products can lead to devastation due to rapid fluctuations in the weather.
   C) Educational opportunities may be narrowed.
   D) Living standards may decrease.

256. Which of these is among the top five U.S. exports to China?
   A) furniture
   B) toys
   C) soybeans
   D) accounting services

257. Which of these is one of China's top five exports to the United States?
   A) furniture
   B) cars
   C) soybeans
   D) accounting services

258. (Table) According to the data in the table, who has an absolute advantage in the production of shirts?

<table>
<thead>
<tr>
<th></th>
<th>Hours to Produce a Shirt</th>
<th>Hours to Produce a Cake</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tom</td>
<td>5</td>
<td>3</td>
</tr>
<tr>
<td>Joe</td>
<td>6</td>
<td>4</td>
</tr>
</tbody>
</table>

   A) Tom, because he can produce more shirts in a week than Joe can
   B) Joe, because he can produce more shirts in a week than Tom can
   C) Tom, because he cannot produce as many shirts as Joe can
   D) Joe, because he cannot produce as many shirts as Tom can
259. (Table) According to the data in the table, which statement explains who has a comparative advantage in the production of shirts?

<table>
<thead>
<tr>
<th></th>
<th>Hours to Produce a Shirt</th>
<th>Hours to Produce a Cake</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tom</td>
<td>5</td>
<td>3</td>
</tr>
<tr>
<td>Joe</td>
<td>6</td>
<td>4</td>
</tr>
</tbody>
</table>

A) Tom, because he can produce a shirt in fewer hours than Joe can  
B) Joe, because he uses more hours than Tom to produce a shirt  
C) Tom, because he gives up production of 1.67 cakes for every shirt he produces  
D) Joe, because he gives up production of 1.5 cakes for every shirt he produces

260. (Table) Looking at the data for Tom and Joe, what specialization pattern will exist if trade is based on comparative advantage?

<table>
<thead>
<tr>
<th></th>
<th>Hours to Produce a Shirt</th>
<th>Hours to Produce a Cake</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tom</td>
<td>5</td>
<td>3</td>
</tr>
<tr>
<td>Joe</td>
<td>6</td>
<td>4</td>
</tr>
</tbody>
</table>

A) Tom will specialize in shirts and Joe will specialize in cakes.  
B) Tom will specialize in cakes and Joe will specialize in shirts.  
C) Tom will specialize in both cakes and shirts.  
D) Joe will specialize in both cakes and shirts.

261. Can a country have a comparative advantage in producing a good without also having an absolute advantage in producing that good?

A) No, it can't because comparative advantage grows out of absolute advantage.  
B) No, it can't because they are different terms for the same concept.  
C) Yes, it can because comparative advantage is based upon being able to produce more and absolute advantage is not.  
D) Yes, it can because each type of advantage has a different basis.

262. Imagine two countries with identical endowments of resources. Using all its resources, Broland can produce 5,000 books or 8,000 forks. Using the same resources, Nomia can produce 4,000 books or 7,000 forks. Which country has a comparative advantage producing books?

A) Broland, because it gives up 0.63 of a fork for each book produced  
B) Nomia, because it gives up 0.57 of a fork for each book produced  
C) Broland, because it gives up 1.6 forks for each book produced  
D) Nomia, because it gives up 1.75 forks for each book produced
263. Imagine two countries with identical endowments of resources. Using all its resources, Broland can produce 5,000 books or 8,000 forks. Using the same resources, Nomia could produce 4,000 books or 7,000 forks. Which country has a comparative advantage producing forks?
A) Broland, because it gives up 0.63 of a book for each fork produced
B) Nomia, because it gives up 0.57 of a book for each fork produced
C) Broland, because it gives up 1.6 books for each fork produced
D) Nomia, because it gives up 1.75 books for each fork produced

264. Assume that Australia has a comparative advantage over France in the production of pencils, and that France has a comparative advantage over Australia in the production of haircuts. What is a practical reason why Australia and France might NOT trade?
A) The high transportation costs for travel between the countries might discourage trade in haircuts.
B) Given current communication technologies, it is unlikely that people in one country could learn of the hairstyles available in the other country.
C) Pencils are very fragile and are likely to be damaged during shipment.
D) Australian pencil makers might resist the import of pencils into Australia even though comparative advantage indicates Australia should import pencils.

265. Which of the following is NOT a benefit to a country that comes from trade based upon comparative advantage?
A) The country is able to consume a combination of goods outside its production possibilities frontier.
B) The country may be able to adopt technologies that have been developed abroad.
C) The country reduces its risk of being dependent on trading partners for certain goods.
D) Efficiency in production will be high due to specialization.

266. “How goods and services are advertised” is one of the three basic economic questions that each society must answer.
A) True
B) False

267. The "what" question of the three basic questions is "What price should be charged for a good?"
A) True
B) False
268. Distribution refers to the way an economy allocates to consumers the goods and services it produces.
   A) True
   B) False

269. In a capitalist society, consumers signal what products they want by their demands.
   A) True
   B) False

270. Another term for “market economy” is “capitalist economy.”
   A) True
   B) False

271. Only capitalist economies must answer the three basic economic questions.
   A) True
   B) False

272. Natural resources, such as water, are included in capital resources.
   A) True
   B) False

273. As used by economists, the term “capital” includes the human talent one is born with.
   A) True
   B) False

274. Economists include mineral deposits, oil, natural gas, and water in their definition of land.
   A) True
   B) False

275. Natural resources in the production process are called land and their payment is called interest.
   A) True
   B) False
276. Labor as a factor of production includes the mental but not physical talents of people.
   A) True
   B) False

277. Capital, as a factor of production, includes all manufactured products that are used to produce other goods.
   A) True
   B) False

278. Entrepreneurs combine land, labor, and capital to produce goods and services.
   A) True
   B) False

279. In economics, “capital” refers to a company's money resources.
   A) True
   B) False

280. Capital refers to the total amount of money in hedge and “venture capital” funds.
   A) True
   B) False

281. Water is included in the definition of land.
   A) True
   B) False

282. Allocative efficiency ensures that the goods and services demanded by society are produced.
   A) True
   B) False

283. If a firm produces its mix of output at the lowest possible cost, it is said to have achieved production efficiency.
   A) True
   B) False
284. “Production efficiency” is defined as producing the mix of goods and services most desired by society.
   A) True
   B) False

285. When the mix of goods and services produced is the mix most desired by society, the result is called allocative efficiency.
   A) True
   B) False

286. The production possibilities frontier (PPF) graphically represents the combinations of two goods that are possible for a society to produce at full employment.
   A) True
   B) False

287. The production possibilities frontier shows the combinations of output that are both attainable and unattainable.
   A) True
   B) False

288. An increase in the unemployment rate will shift the production possibilities frontier to the right.
   A) True
   B) False

289. Any point inside the production possibilities frontier represents an output combination produced at full employment.
   A) True
   B) False

290. All output combinations on the production possibilities frontier are attainable.
   A) True
   B) False

291. Opportunity cost applies only to personal purchasing decisions.
   A) True
   B) False
292. An example of the application of opportunity cost occurs when a government makes the choice between health care spending and military spending.
   A) True
   B) False

293. Employing resources that are not as well-suited to making a particular product decreases the opportunity cost of producing that product as opposed to other products.
   A) True
   B) False

294. A production possibilities frontier will have a curved or “bowed out” shape if opportunity costs are increasing.
   A) True
   B) False

295. (Figure: Tanks and Health Care) At point \( f \), in order to produce more tanks, society must give up a certain amount of health care services.
   A) True
   B) False
296. (Figure: Tanks and Health Care) The tradeoff in moving from point $a$ to point $c$ is represented by a gain of $50$ million in health care services and a loss of 2,000 tanks.

A) True
B) False

297. (Figure: Tanks and Health Care) The opportunity cost of moving from point $c$ to point $b$ is about $50$ million in health care services.

A) True
B) False
298. As it relates to the production possibilities frontier, an increase in technology for one good while holding all else constant will cause a complete outward shift of the production possibilities frontier.
A) True
B) False

299. (Figure: Pork and Corn PPF) It is possible to produce 15 units of corn and 4 units of pork at the same time.

A) True
B) False
300. (Figure: Pork and Corn PPF) Economists can unequivocally tell which point of production is ideal.

A) True
B) False

301. The production possibilities frontier is bowed outward as a result of increasing costs.
A) True
B) False

302. The choice to attend a free college lecture involves no opportunity cost.
A) True
B) False

303. There is no opportunity cost involved when the government decides to cut federal taxes.
A) True
B) False

304. The idea that resources are specialized is the reason for increasing opportunity costs.
A) True
B) False

305. Immigration, both legal and illegal, is a component of America's economic growth.
A) True
B) False
306. A nation that consumes most of what it produces will have a lower growth rate than another nation that focuses more on the production of capital goods.
   A) True  
   B) False

307. If a society's production possibilities frontier shifts to the right, the society's standard of living will likely increase.
   A) True  
   B) False

308. Labor and entrepreneurial ability are the principal resources that can be changed through government action.
   A) True  
   B) False

309. Technological improvements in one industry never allow other industries to increase their production with existing resources.
   A) True  
   B) False

310. Adam Smith is credited with being the first to define the concept of comparative advantage.
   A) True  
   B) False

311. Free trade is known as a positive-sum game because both parties to a transaction can receive positive gains.
   A) True  
   B) False

312. A country has to be able to produce both goods at a faster rate in order to have an absolute advantage.
   A) True  
   B) False
313. Absolute advantage is defined as when goods and services are produced at their lowest resource (opportunity) cost.
A) True
B) False

314. If one country has an absolute advantage over another country in producing all goods, the countries will not gain from trading.
A) True
B) False

315. (Figure: Turtletopia and Frogland PPFs) Turtletopia has the absolute advantage in producing both corn and pork.
A) True
B) False

316. A country is said to have an absolute advantage if it can produce more of a good than another country can.
A) True
B) False

317. One country has a comparative advantage in producing a good if its opportunity cost to produce that good is lower than that of another country.
A) True
B) False
318. A country should always produce the items in which it has an absolute advantage.
   A) True
   B) False

319. If there are two goods and two countries, then one country can have both an absolute
and a comparative advantage in both goods.
   A) True
   B) False

320. If countries specialized and then traded, world production would increase.
   A) True
   B) False

321. Comparative advantage stems from differences in the relative costs of producing goods
and services.
   A) True
   B) False

322. If the United States has a comparative advantage over France in producing corn, the
opportunity cost of the United States producing corn is lower than France’s opportunity
cost of producing corn.
   A) True
   B) False

323. If the United States has absolute advantages in producing wheat and automobiles, it
should never trade with other countries that produce wheat and automobiles.
   A) True
   B) False

324. Every industry in all countries benefit from increased international trade.
   A) True
   B) False

325. The effects of North American Free Trade Agreement (NAFTA) have proven that
opening up to free trade will hurt domestic workers in every industry in the U.S.A..
   A) True
   B) False
326. Free trade and the law of comparative advantage increase the standard of living for each person in a country.
   A) True
   B) False

327. If two countries can benefit by trading with each other, no industries in either country may suffer.
   A) True
   B) False

328. Industries at a comparative disadvantage may find it necessary to decrease their workforce.
   A) True
   B) False

329. Much of the economic growth we have seen over the past century has been due to population growth.
   A) True
   B) False

330. The United States imports more electrical goods from China than it exports to China.
   A) True
   B) False

331. Describe the three basic questions that must be answered for any economy; and provide explanations for each question for both capitalist and more government-controlled economies.

332. Explain how a free market economy decides what to produce.

333. Briefly describe the four types of resources used in production.

334. In a movie theater, what product is produced? Give an example of capital used in the production process.
335. Suppose you are a restaurant owner. What is your output? What resources do you need and how would you classify them under the four categories?

336. Compare and contrast the two types of capital discussed in the textbook. When economists refer to capital, which type do they mean?

337. Describe the role entrepreneurs play in a capitalistic economy.

338. Can a productively efficient economy be allocatively inefficient? Explain.

339. Explain the differences between production and allocative efficiency.

340. (Figure: Tanks and Health Care) Refer to the graph and table and calculate the opportunity costs of moving from points \(a\) to \(b\), \(b\) to \(c\), and \(c\) to \(d\).

<table>
<thead>
<tr>
<th>Point</th>
<th>Health Care (millions)</th>
<th>Tanks (hundreds)</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a)</td>
<td>0</td>
<td>80</td>
</tr>
<tr>
<td>(b)</td>
<td>20</td>
<td>75</td>
</tr>
<tr>
<td>(c)</td>
<td>50</td>
<td>60</td>
</tr>
<tr>
<td>(d)</td>
<td>80</td>
<td>30</td>
</tr>
<tr>
<td>(e)</td>
<td>100</td>
<td>0</td>
</tr>
<tr>
<td>(f)</td>
<td>20</td>
<td>40</td>
</tr>
<tr>
<td>(g)</td>
<td>80</td>
<td>70</td>
</tr>
</tbody>
</table>
341. (Figure: Tanks and Health Care) Which points in the graph and table are considered attainable and why?

<table>
<thead>
<tr>
<th>Point</th>
<th>Health Care (millions)</th>
<th>Tanks (hundreds)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>0</td>
<td>80</td>
</tr>
<tr>
<td>b</td>
<td>20</td>
<td>75</td>
</tr>
<tr>
<td>c</td>
<td>50</td>
<td>60</td>
</tr>
<tr>
<td>d</td>
<td>80</td>
<td>30</td>
</tr>
<tr>
<td>e</td>
<td>100</td>
<td>0</td>
</tr>
<tr>
<td>f</td>
<td>20</td>
<td>40</td>
</tr>
<tr>
<td>g</td>
<td>80</td>
<td>70</td>
</tr>
</tbody>
</table>
342. (Figure: Tanks and Health Care) Why is the “bowed out” curve shown in the figure a more realistic depiction of the production possibilities frontier (PPF) than a straight line?

<table>
<thead>
<tr>
<th>Point</th>
<th>Health Care (millions)</th>
<th>Tanks (hundreds)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>0</td>
<td>80</td>
</tr>
<tr>
<td>b</td>
<td>20</td>
<td>75</td>
</tr>
<tr>
<td>c</td>
<td>50</td>
<td>60</td>
</tr>
<tr>
<td>d</td>
<td>80</td>
<td>30</td>
</tr>
<tr>
<td>e</td>
<td>100</td>
<td>0</td>
</tr>
<tr>
<td>f</td>
<td>20</td>
<td>40</td>
</tr>
<tr>
<td>g</td>
<td>80</td>
<td>70</td>
</tr>
</tbody>
</table>

343. Describe how expansion of resources and technological improvements can cause economic growth.

344. Describe how technological improvements in communication lead to increased growth in other industries without additional resources.

345. Explain one strategy that a government can follow to promote economic growth.

346. What can governments do to increase economic growth?
347. There is much debate regarding immigration into the United States. Using a production possibilities frontier graph, show what would happen if all immigration were halted.

348. Economists maintain that there is a tradeoff between current consumption and future consumption. Explain what they mean.

349. Compare and contrast absolute and comparative advantages.

350. Isabel can bake six cakes or 240 muffins in an eight-hour day. Pawel can bake 12 cakes or 360 muffins in an eight-hour day. Who has a comparative advantage in cakes, and what is his or her opportunity cost of producing one additional cake?

351. Explain why Country 1, which has an absolute advantage over Country 2 in producing two products (e.g., corn and clothing), would trade with Country 2.

352. Why would it be risky for Haiti to specialize in sugar cane production even if it has a comparative advantage in this area over most other countries?
